A catalogue of the Coelenterate type specimens of the Zoological Museum of Amsterdam. II. Benthic Hydrozoa

R. W. M. VAN SOEST

ABSTRACT

This second part of the Coelenterate type catalogue of the Zoological Museum of Amsterdam lists 133 nominal types of benthic Hydrozoa (112 hydroids, 21 hydrocorals).

INTRODUCTION

The order in which the types listed below are given is derived from Vervoort (1972) (hydroids) and Boschma (1957) (hydrocorals), as far as the systematics of taxa above the genus level are concerned. For general information on this type catalogue one is referred to the first part (van Soest, 1975).

Prof. Dr. W. Vervoort (Rijksmuseum van Natuurlijke Historie, Leiden) kindly checked the manuscript and made some valuable suggestions.

There is some confusion in the way Billard spelled the name of his new va-self, so that in all probability "*undulata*" is the name Billard intended.

it is "*undulata*"; the specimen in the jar is labeled "*undulata*" by Billard himself, so that in all probability "*undulata*" is the name Billard intended.

Holotype: (among numerous specimens of *D. crisioides*, ZMA COEL. no. 4653-4657).

After Billard had described *S. serrata* nov. spec. (1919), he had second

thoughts, and considered it synonymous with *D. crisioides* (1925). When he returned the Siboga hydroids to Amsterdam the holotype of *S. serrata* was already included in the vast amount of specimens of *D. crisioides*, and as Billard gave no type locality with the description of *S. serrata* it will be virtually impossible to isolate the specimen. It might as well be considered lost.

Next to the type material from station 80 and additional material from station 164 there is another sample of this species in the ZMA-collections, labeled "co-type, stat. 65a" by Billard. This material is not mentioned in either of Billard's papers.

Syntypes: several specimens, ZMA COEL. no. 3842.
Type locality: Siboga Exped., stat. 144.
Billard states that *S. megathecum* is a *nomen novum* for specimens wrongly assigned to *S. tubithecum* (Allman, 1885) by several authors. This means that *S. megathecum* is not a new name but a new species.
