23. A revision of the genus <i>Rhyticaryum</i> Becc..	249
24. The genus <i>Sarcostigma</i> W. & A.	253
25. A revision of the genus <i>Stemonurus</i> Bl. emend. Becc.	255
26. <i>Whitmorea</i> Sleum., a new genus from the Solomon Islands	263

I. INTRODUCTION

In the present work details are given in the first place for the Malesian *Icacinaceae*, representing the basis of my forthcoming treatment of the family in 'Flora Malesiana' in which full descriptions of the Malesian genera and species will be given. Being connected closely with the *Icacinaceae* of South and Southeast Asia on the one, and with Australia and the Pacific on the other side, and in part even with those of Africa incl. Madagascar, it has been necessary to study the respective materials too, without, however, to perform a complete revision of all *Icacinaceae* in these parts of the world. This was the less necessary, as R. A. Howard (1940—42) already has revised part of the genera concerned. The elaboration of the family in several local treatments has much contributed to our knowledge of the family for Africa.

Of the genera formerly included in Asiatic-Malesian *Icacinaceae* *Leucocrema* Ridl. has

been transferred to *Trichadenia* Thwait., *Matpania* Gagnep. to *Bouea* McIsn., and *Pentastira* Ridl. to *Dichapetalum* Thou.

Herbarium specimens (rather completely for Malesia only) were studied from loans from, resp. partly during visits to the following herbaria:

Berkeley (UC, Philippine specimens only), Bogor (BO), Cambridge (CGE), Cambridge, Mass. (A, in part, or cited from list), Copenhaque (C), Edinburgh (E), Florence (FI), Geneva (G), Kepong (KEP), Kew (K), Kuching (SAR), Leyden (L), London (BM), Paris (P), Sandakan (SAN), Singapore (SING), Stockholm (S), Uppsala (UPS), Utrecht (U), Wroclaw (WRSL, Herb. Lauterbach).

Generally no collector's names in serial herbarium materials are mentioned. The following abbreviations are used:

ANU	= Australian National University, Canberra.
bb.	= bosschen buitengewesten, i.e. collections outside Java of the Forest Research Institute at Bogor, Java.
B.N.B. For. Dep.	= British North Borneo Forestry Department.
BRUN	= Forestry Department Brunei.
B.S.	= Bureau of Science, Manila.
BSIP	= British Solomon Islands Protectorate.
BW	= Boswezen (in New Guinea).
Cel	= Celebes collections of the Forest Research Institute at Bogor, Java.
CF.	= Conservator of Forests, early series of the Forest Research Institute, Kepong.
F.B.	= Forestry Bureau, Manila.
F.M.S.	= Federated Malay States (Museum).
F.R.	= Forest reserve.
FRI	= Forest Research Institute, Kepong.
F.R.I.	= Forest Research Institute, at Bogor, Java.
H.B.	= Herbarium Bogoriense.
I.	= island (Is = islands).
Ja.	= Java collections of the Forest Research Institute at Bogor, Java.
KEP	= Forest Research Institute, Kepong.
Mt	= Mount.
NGF	= New Guinea Forest Department, Lae.
n.v.	= non vidi (specimens not seen by the author).
P.	= Pulu (island).
P.F.	= Protected forest.
Phyt. Surv. Malaya	= Phyto-Chemical Survey of the Federation of Malaya, Kuala Lumpur.
PNH	= Philippine National Herbarium, Manila.
S	= Forest Department of Sarawak, Kuching.
SAN	= Forest Department of North Borneo (Sabah), Sandakan (ditto SAN A).
SF	= Singapore Field Number.
Sg.	= Sungai (river valley).

2. KEY TO THE GENERA OF ICACINACEAE IN ASIA, MALESIA, AUSTRALIA, AND THE PACIFIC¹⁾

1. Trees or (not climbing) shrubs. (Leaves always spiral.)
2. Sepals essentially free at least in their upper $\frac{1}{4}$ part, and imbricate.
 3. Flowers bisexual.
 4. Petals free, valvate or subimbricate. Tropical C. and S. America (flowers there sometimes polygamous), Malesia, Australia (New South Wales, Queensland), Solomon Is, New Caledonia, Loyalty Is, New Hebrides, Samoa, Fiji, Tonga Citronella
 4. Petals connate below into a tube, their upper part free and valvate in bud. New Guinea. Pseudobotrys

1) Only the genera printed in bold letters are treated in this paper.

3. Flowers unisexual (or functionally so, i.e. the plant dioecious). (Petals connate below.)
5. Filaments free, fixed to the very base of the petals. Leaves with a layer of rounded to star-shaped appressed scales underneath, at least in the young state. SE. Asia, Malesia incl. New Britain *Platea*
5. Filaments adnate for almost their entire length to the lower tubular part of the petals. Scales absent. SE. Asia incl. Formosa, Malesia. *Gonocaryum*
2. Sepals connate into a cup-like calyx, their upper free part (calyx lobes), if any, short and not imbricate.
6. Flowers unisexual (or functionally so, i.e. the plant dioecious).
7. Drupe ovoid-ellipsoid or oblongoid, without a fleshy lateral appendage.
8. Flowers in terminal panicles. Style short. Australia (New South Wales, Queensland), Norfolk I., New Zealand *Pennantia*
8. Flowers in rather short axillary cymes. Style none. SE. Asia incl. Ceylon and India, Malesia incl. New Britain and New Ireland, Solomon and Santa Cruz Is, Australia (Queensland). *Gomphandra*
7. Drupe laterally compressed (almond-like).
9. Drupe without a fleshy lateral appendage. Flowers in spikes (or very rarely in panicles composed of spikes, or reduced to a few-flowered fascicle). E. Malesia incl. New Britain, New Ireland, and Admiralty Is, Solomon Is, Australia (N. Queensland). . . *Rhyticaryum*
9. Drupe with a thick-fleshy laterally borne practically entirely adnate appendage. Flowers in cymes.
10. Fertile ovary (besides the appendage) with an almost free, thick-squamular unilateral disk. New Guinea *Hartleya*
10. Fertile ovary without such a free disk.
11. Filaments glabrous. Fleshy appendage of drupe covering 2 pronounced longitudinal ribs of the endocarp. Andaman & Nicobar Is, Philippines (Mindoro, Palawan). *Codiocarpus*
11. Filaments with distal, longish, club-shaped hairs at least in the fertile stamens. Endocarp with less pronounced or no such ribs under the appendage.
12. Drupe plano-convex, the fleshy appendage on the convex surface of the fruit surmounting a T-shaped keel of the endocarp, the other surface plane or but slightly concave. Australia (N. Queensland). *Irvingbaileya*
12. Drupe strongly curved, the fleshy appendage on the concave surface, the other surface convex with the endocarp strongly ridged lengthwise. Malesia incl. Bismarck Archipelago, Caroline (Palau) Is, Solomon Is, Fiji, Samoa. *Medusanthera*
6. Flowers bisexual.
13. Ovary with a lateral swelling which in the fruit develops into a thick succulent appendage.
14. Disk present, a unilateral fleshy scale free from the appendage. New Caledonia. *Gastrolepis*
14. Disk absent.
15. Petals with a prominent midrib inside. New Caledonia *Anisomallon*
15. Petals without a prominent midrib inside. Africa incl. Madagascar, Comores, Mauritius, and Réunion, S. & SE. Asia, W. Malesia, Australia (Queensland). *Apodytes*
13. Ovary and fruit without such an adnate appendage. Disk present or not.
16. Connective surpassing the anther-cell as a marked glabrous apiculus.
17. Disk cup-shaped, adnate to the ovary. Endocarp of drupe hard, rather thin. SE. Asia. *Pittosporopsis*
17. Disk absent. Endocarp of drupe thick, outer part finally spongy-corky and deeply irregularly lacunose. E. Malesia incl. Bismarck Archipelago, Solomon Is, Marianas (Rota), and Caroline Is (Kusaie) *Merrilliodendron*
16. Connective, if any, hardly or not surpassing the anther-cell.
18. Peduncle of inflorescence with numerous small knob-like bracts which form alveoles. Stigma peltate. Disk absent. W. Malesia *Cantleya*
18. Peduncle of inflorescence quite smooth. Stigma small, subcapitate or point-like. Disk ± cup-shaped.
19. Inflorescence usually terminal. Anthers glabrous. S. & SE. Asia incl. Lan Yu I. and Ryu Kyu Is, S. & C. China, W. Malesia. *Nothapodytes*
19. Inflorescence axillary. Anthers with a distal tuft of penicillate hairs.

20. Flowers sessile. Petals up to 6 mm, free to almost the base. Stigma point-like at the top of the upper ± attenuate (sometimes shortly style-like) part of the ovary. SE. Asia incl. Ceylon, Malesia, Micronesia (Palau), and Solomon Is *Sternonurus*

20. Flowers pedicelled for 1—2 mm. Petals (12—)13—15 mm, free in the distal part only. Stigma small, on one side of the inverted, i.e. cup-like distal part of the ovary. Solomon Is *Whitmorea*

1. Climbing shrubs, or lianas, sometimes with tendrils. Flowers unisexual or functionally so, or polygamous.

21. Leaves opposite.

22. Anthers broadly club-shaped to subglobular, many-celled, with numerous pollen-bearing alveoles. New Guinea, Solomon Is *Polyporandra*

22. Anthers, as usual, with 2 cells.

23. Filaments (very) short in relation to the petals. Stigma small, capitate, with a ± deep depression to one side. Endocarp generally coarsely reticulate-lacunose, very rarely smooth outside. Africa incl. Madagascar, SE. Asia, Malesia. *Iodes*

23. Filaments elongate in relation to the petals. Stigma capitate, ± distinctly 5(—6)-crenulate. Endocarp rather finely tubercled inside. SE. Asia, W. Malesia. *Mappianthus*

21. Leaves spirally arranged. Tendrils never present.

24. Flowers in elongate spikes or spike-like racemes, these solitary or sometimes collected to panicles.

25. Leaves ± elliptic, coriaceous, glabrous, entire, much reticulate. Drupe ellipsoid. S. & SE. Asia, W. Malesia *Sarcostigma*

25. Leaves cordate, chartaceous, long-petioled, pubescent, dented or lobed. Drupe laterally compressed.

26. Flowers in loose panicles. W. & C. China, SW. Japan *Hosiae*

26. Flowers in spikes or spike-like racemes.

27. Calyx (sepals) absent. Africa incl. Madagascar, S. & SE. Asia, Malesia (Philippines). *Pyrenacantha*

27. Calyx present.

28. Petals free. SE. Asia *Natsiatum*

28. Petals connate for their lower 2/3 to a tube, lobes free. SE. Asia (Burma). *Natsiatopsis*

24. Flowers in peduncled heads or umbels, these solitary or collected to racemes or panicles.

29. Style absent; stigma sessile, thick-peltate. S. & SE. Asia, W. Malesia. *Miquelia*

29. Style short-columnar, with 2—4 stigmatic lobes. SE. Asia, Malesia (eastwards to New Guinea) *Phytocrene*

3. THE GENUS APODYTES E. MEY. EX ARN. IN ASIA AND MALESIA

A preliminary investigation of the Afro-Asiatic materials of *Apodytes* has revealed, that no single constant character can be found neither in the indumentum of various organs nor in the leaf-forms and -sizes, flowers or fruits, to discriminate more than one species. The pattern of variation shown by lowland or montane races, of such of dense forest or in more open, maybe secondary vegetation, is probably the expression of local ecotypes, and its genetical background might be polyploidy. An evaluation of these races with the infraspecific categories can only be obtained by a monographic treatment which is much beyond the scope as far as my work for 'Flora Malesiana' is concerned. For the moment it seems to be justified to accept only one species for Africa, Asia, and Malesia, the oldest name of which is *A. dimidiata* E. Mey. ex Arn. from Africa. Most of the type collections of the Asiatic species cited here in synonymy have been checked in various herbaria.

APODYTES

E. Meyer ex Arn. in Hook., J. Bot. 3 (1840) 155; Miers, Ann. Mag. Nat. Hist. II, 9 (1852) 387—389, repr. Contr. Bot. 1 (1852) 57—59, pl. 5.

Distribution: Tropical and subtropical NE. to S. Africa and Angola, Ceylon, S. India, Assam, Burma, Thailand, Indochina, Yunnan, Hainan, and Malesia.

Note. For S. India, Assam, Burma, Thailand, Indochina, Yunnan, and Hainan compare the above cited literature.

BURMA. Myitkina, McKee 6301 & 6304 (K).

THAILAND. Payap: Chiengmai, Pang Tawn, Put 3815 (K); Chiengdao, Muang Keng, c. 700 m, Kerr 5520, 5433, 5812, 8532. — Pitsanulok: Thung Salaeng Luang, 500 m, Shimizu T. 11276, 11281, 11289 (all at K).

MALAY PENINSULA. Kelantan, Mt Ayam, waterfall, 900 m, For. Dep. F.M.S. 37743 (K, KEP). — Pahang: Cameron Highl., For. Dep. F.M.S. 37538 (K, KEP).

SUMATRA. Eastcoast: Simelungun F. R., Mariahahuta, 800 m, bb. 2920 (BO).

JAVA. W. Java: Blume (L), Junghuhn (Pl. Jungh. 127, L). — Priangan: Tjigenteng, 1400 m, Koorders 6066 (tree n. 2155a, BO & L, lectotype of *A. javanica*, = *A. cambodiana* in Atlas, t. 117), 9891 & 9892 (from tree n. 2155a), 33741 (from tree n. 2155a), 33747, 33766; Tjibodas-Tjibureum, 1500 m, den Berger 605, Koorders 41532, 41986, 42827; ibid., Pangrango-Gedeh, 1800 m, Kostermans c.s. UNESCO 289.

SUMBA. Eastern part, Lai Rondja, 1000 m, bb. 8993.

Flores. Ruteng, Verheijen 2188, 2189.

TIMOR. Western part, Mt Mutis, 1200 m, de Voogd 2291.

BORNEO. N. Borneo: Mt Kinabalu, Penibukan ridge, base of great wall, 1830 m, Clemens 40872; ibid., Pinokok R. falls, 1525 m, Clemens 40797; Pinosok plateau, 1465—1615 m, SAN 42895, Chew, Corner & Stainton 1836; Mt Trusmadi, 1830 m, SAN 41884.

PHILIPPINES. Mindanao: Bukidnon, Miridana, vicinity of Tangkulan, B.S. 24941 (A, n.v.; BM, BO, K, L; PNH, type of *Mappia philippinensis*, †).

MOLUCCAS. Batjan: N. slope of Mt Sibela, 2000 m, Alston 16979 (BM).

EXCLUDED

Apodytes andamanica Kurz, Prel. Rep. For. & Veg. Pegu (1875) 37 = *Codiocarpus andamanicus* (Kurz) Howard.

4. THE GENUS CANTLEYA RIDL.

CANTLEYA

Ridl., Fl. Mal. Pen. 1 (1922) 436; Howard, J. Arn. Arb. 21 (1940) 479; Sleum. in E. & P., Nat. Pfl. Fam. ed. 2, 20 b (1942) 365.

I. Cantleya corniculata (Becc.) Howard, J. Arn. Arb. 21 (1940) 479, pl. 2, f. 1—7; Masam., En. Pl. Born. (1942) 422; Dahl, J. Arn. Arb. 33 (1952) 270, f. 61, 61 A (Pollen); Browne, For. Tr. Sarawak & Brunei (1955) 199; Smythies, Common Sarawak Tr. (1965) 71. — *Platea corniculata* Becc., Malesia 1 (1877) 117; Valet., Crit. Overz. Olacinae (1886) 254. — *Urandra* sp., Foxworthy, Philip. SUMATRA. Atjeh: 'Senghel' (prob. Singkil), bb. 13662. — Eastcoast: Kamparkiri, 10 m, bb. 25558; Siak, 25 m, bb. 18559. — Tapanuli: Sibolga, 25 m, bb. 27143, 29527, de Haan 841. — Indragiri: bb. 28538; Kuala Belilas, 60 m, bb. 27633. — Palembang: Rawas, 80 m, Dumas 1530, Grashoff 1530; Palembang, 100 m, Grashoff 1002; Banjuasin, 15—25 m, Grashoff F.R.I. 36E, 663, 664, 668, 689, 690, 701, 702, 708, 717, 721, F.R.I. T. 1020, 1164. — Djambi: bb. 12792, 13652, F.R.I. T.B. 680.

RIOUW ARCH. P. Kedondong, 100 m, bb. 24818; P. Gelang, 4 m, bb. 29151; P. Bintang, Teysmann.

LINGGA ARCH. bb. 27710/13; P. Singkep, 5 m, Amat 35, bb. 2071, 2676, 2709, 3863, 4934.

BANKA. 25 m, Berkhout 1055, Grashoff 32, bb. 29492/4; Djebus, Teysmann; Mt Maras, 100—300 m, bb. 34231, Kostermans & Anta 1360; Mt Mangkol, 50—100 m, bb. 34204, Kostermans & Anta 687; Muntok, bb. 7824.

MALAY PENINSULA. Johore: no locality given, *Cantleya* 19 (K, type of *Cantleya johorica*); Kota Tinggi, Panti F.R., KEP 62801, 93686; Pontian, Pekan Menas, KEP 69805, 70858; Sg. Sembut, For. Dep. F.M.S. 5826; Batu Pahad, For. Dep. F.M.S. 5834, 5896, 49301, 49302; Ayer Hitam F.R., For. Dep. F.M.S. 29160, KEP 81453, 95101, F.R.I. 2145, 2146. — Singapore: Jurong, 15th mile, SF 26182.

BORNEO. Sarawak: B.S. 104 Foxworthy, Moulton 2, 1909; 1st Dist., Kuching, 3rd mile Matang road, Haviland 2086; Bukit Siol, 100 m, S 374; Ludun, S 9632; 3rd Dist., Bukit Iju, S 23638. — Brunei: B.N.B. For. Dep. 2797; Tutong, BRUN 5712; Ladan hills F.R., 60 m, S 1700. — W. Borneo: Sanggau, bb. 17137; Matan, 10 m, bb. 14430; Pamengkat, 5 m, bb. 11341; Singkawang, 2—5 m, bb. 18003, 24218; Landak, 40 m, Heyne 2853, bb. 6392; Pontianak, Dumont; Sambas, van Houten; Ketapang, 10 m, F.R.I. 7444. — N. Borneo: Labuan, Motley 97 (K). — NE. Borneo: Berau, 10 m, bb. 27055; Bulungan, 150 m, bb. 11187; ibid., Sebakis R. region, Kostermans 9291, 9307; Tarakan, Meijer 2595. — E. Borneo: W. Kutei, 15—30 m, bb. 16772, 16915. — S. Borneo: Sampit, 3—5 m, Buwalia 7821, 7856, bb. 32389, 32417.

CULT. Hort. Bogor. anno 1876, Beccari Herb. n. 2460 & 2461 (Fl, type of *Platea corniculata*; K).

5. THE GENUS CITRONELLA D. DON IN MALESIA AND THE SOLOMON ISLANDS

CITRONELLA

D. Don, Edinb. New Phil. J. 13 (1832) 243; Howard, J. Arn. Arb. 21 (1940) 471; Contr. Gray Herb. 142 (1942) 60—89, pl. 4—6; Back. & Bakh. v. d. Br., Fl. Java 2 (1965) 59. — *Villaresia* R. & P., Fl. Per. Chil. 3 (1803) 9, t. 231, nom. illeg., non R. & P. 1793; Boerl., Handl. 1, 1 (1890) 218; Engl. in E. & P., Nat. Pfl. Fam. III, 5 (1893) 244; Sleum. in *ditto*,

ed. 2, 20 b (1942) 350. — *Pleuropetalon* Bl., Mus. Bot. Lugd. Bat. 1 (1850) 248, *nom. illeg.*, *non* Hook. f. 1845. — *Chariessa* Miq., Fl. Ind. Bat. 1 (1856) 794 (based on *Pleuropetalon* Bl.); Engl. in E. & P., Nat. Pfl. Fam. III, 5 (1893) 245; Sleum. in *ditto*, ed. 2, 20 b (1942) 348; Amsh. in Back., Bekn. Fl. Java (em. ed.) 6 (1948) fam. 135, p. 2.

KEY TO THE SPECIES IN MALESIA AND ADJACENT AREAS

1. Drupe essentially ellipsoid-oblongoid, (1.6—)1.8—2.2(—2.4) by 0.9—1.2(—1.3) cm. Simalur, W. & C. Java, Borneo, Celebes, Kai Is, New Guinea ***I. C. suaveolens***
1. Drupe ovoid, or ovoid-ellipsoid, or broadly ellipsoid, 2—3 by 1.8—2 cm.
 2. Leaves broadly ovate, base ± obtuse to rounded. Solomon Is, Samoa, Tonga, New Hebrides.
 2. Leaves oblong- to obovate-elliptic, base ± cuneate.
 3. Leaves ± obtuse or shortly and rather abruptly acuminate at apex, tip blunish. Samar.
 3. Leaves rather gradually and ± acutely acuminate at apex. Luzon ***4. C. philippinensis***
1. ***Citronella suaveolens* (Bl.) Howard**, J. Arn. Arb. 21 (1940) 475; Contr. Gray Herb. 142 (1942) 82; Back. & Bakh. v. d. Br., Fl. Java 2 (1965) 59. — *Pleuropetalon suaveolens* Bl., Mus. Bot. Lugd. Bat. 1 (1850) 248. — *Chariessa suaveolens* (Bl.) Miq., Fl. Ind. Bat. 1 (1856) 794; Becc., Malesia 1 (1877) 118; Koord., Exk. Fl. Java 2 (1912) 530; Sleum., Notizbl. Berl.-Dahl. 15 (1940) 229; Amsh. in Back., Bekn. Fl. Java (em. ed.) 6 (1948) fam. 135, p. 2 — *Villaresia suaveolens* (Bl.) Valet., Crit. Overz. Olacinae. (1886) 199, pl. 5, f. 32 a—g; Back., Schoolfl. Java (1911) 228. — *C. brassii* Howard, Contr. Gray Herb. 142 (1942) 81.

SIMALUR I. Tapah, fl. & fr., Achmad 131, 220, 792, 941, 1181, 1496, 1536, 1685.

JAVA. W. Java, locality not known, fl., Blume (L, type of *Pleuropetalon suaveolens*; U); fr., Korthals (L). — Bantam: Mt Karang, Koorders 40108. — Bogor: Mt Gedeh, near Tjibunas, 900—1500 m, Junghuhn 95 (L). — Banjumas: Singomerto, Pringombo, 800 m, Koorders 33768. — Kedu: foot of Mts Merbabu and Telemojo, Waitz (L).

BORNEO. Sarawak: 4th Div., Entoyut R. (affl. of the Batu Tinjar R.), Hose 383. — N. Borneo: Mt Kinabalu, Tenompok, 1525 m, Clemens 29895 (BM, BO). — E. Borneo: W. Kutei, Mt Palimasan near Tabang on Belajan R., 400 m, Kostermans 13123.

CELEBES. Menado: Lulumbulan Mts, 700 m, Koorders 19595 (BO, L). — Central part: Malili, Oesoe, 100 m, fr. ellips., Cel II/305 & 348 (BO, L); ibid., Tawibaru, 1500 m, bb. 19578 (BO). — Southwestern part: Peak of Bonthain, Teysmann H.B. 13085, 14118 (BO, L); Gowa, Lembaja, 1600 m, bb. 20434; Buakang, Kampaliang, Teysmann H.B. 13779.

KAI IS. Jaheri 389 (BO, L).

NEW GUINEA. Vogelkop Peninsula: Sorong, Warsamson plain, 50 m, BW 12451; Manokwari, Masni plain, 6 m, BW 10895; ibid., Warmare valley, 120 m, BW 15708. — Geelvinkbay: Nabire, 2 m, Kanehira & Hatusima 11491 (BO). — S. New Guinea: Asmat region, BW 6604 (L). — Western part: Idenburg R., Bernhard Camp, 350—850 m, Brass & Versteegh 13173 (A, type of *C. brassii*, n.v.; BM, BO, L), 13591. — Northern part: mouth of Tami R. near Hollandia, 15 m, BW 2670, 3411; Depapre, 5 m, bb. 14565. — Madang Dist.: Ramu R. valley, 5 miles SE. Faita airstrip, 200 m, Saunders 205. — Morobe Dist.: Butibum R., 60 m, Hartley 10237; Bumbu valley near Lae, NGF 17612; Bupu R., NGF 13804. Oomsis Creek, 300 m, Hartley 10562; Bulolo R. valley, 730—1160 m, NGF 7405, 9191, 17086, 17332; Amamapi Creek, 855 m, NGF 23080. — Central Dist.: Kokoda, 365 m, Carr 16370, 16440, 16511.

2. ***Citronella samoensis* (A. Gray) Howard**, J. Arn. Arb. 21 (1940) 475; Contr. Gray Herb. 142 (1942) 86; Dahl, J. Arn. Arb. 33 (1952) 260 (Pollen); Yuncker, B. P. Bish. Mus. Bull. 220 (1959) 172; Hürlimann, Bauhinia 3, 2 (1967) 197. — *Pleuropetalon samoense* A. Gray, U.S. Expl. Exp. Bot. Phan. 1 (1854) 200; Atlas (1857) pl. 27. — *Chariessa samoensis* (A. Gray) Engl. in E. & P., Nat. Pfl. Fam. III, 5 (1893) 245; Christophersen, B. P. Bish. Mus. Bull. 128 (1935) 128. — *Villaresia samoensis* (A. Gray) Valet., Crit. Overz. Olacinae. (1886) 199.

SOLOMON Is. Bougainville: 850 m, NGF 30588. — Vella Lavella, 30 m, BSIP 11177. — Choiseul: Wagina I., BSIP 5501. — New Georgia, 25 m, BSIP 4831, 6857; Roviana Lagoon, BSIP 1983. — Guadalcanal, Tutuve Mts, 1200 m, Kajewski 2560 (BO), 2562 (L). — San Cristobal: 250—900 m, Brass 2911, BSIP 4262.

NEW HEBRIDES. Aneityum, Milne 279 (K).

Note. Furthermore known from Samoa (Savaii, Tutuila) and Tonga (Eua), cf. Howard, Contr. Gray Herb. 142 (1942) 87.

3. Citronella latifolia (Merr.) Howard, J. Arn. Arb. 21 (1940) 472; Contr. Gray Herb. 142 (1942) 80, pl. 6, f. 9—12. — *Villaresia latifolia* Merr., Philip. J. Sc. 14 (1919) 415; En. Philip. 2 (1923) 488. — *Chariessa latifolia* (Merr.) Sleum., Notizbl. Berl.-Dahl. 15 (1940) 229.

PHILIPPINES. Samar: Pinipisakan, Catubig R., fr., B.S. 24557 (A, n.v.; BM, BO, K, KAG; NY, n.v.; PNH, type of *Villaresia latifolia*, †; UC).

4. Citronella philippinensis (Merr.) Howard, J. Arn. Arb. 21 (1940) 474; Contr. Gray Herb. 142 (1942) 85, pl. 6, f. 1—8; Dahl, J. Arn. Arb. 33 (1952) 260, f. 20 & 20 A (Pollen). — *Villaresia philippinensis* Merr., Philip. J. Sc. 14 (1919) 414; En. Philip. 2 (1923) 488. — *Chariessa philippinensis* (Merr.) Sleum., Notizbl. Berl.-Dahl. 15 (1940) 229.

PHILIPPINES. Luzon: Ilocos Norte, Mt Palimlin, c. 1000 m, fl., B.S. 33267 (A, n.v.; K, P; PNH, type of *Villaresia philippinensis*, †; US, n.v.), 33308 (fr.: A, n.v.; K, P; PNH, †; US, n.v.).

Note. *Chariessa philippinensis* mentioned by Hatusima, Mem. Fac. Agr. Kagosh. Un. 5, 3 (1966) 38, from Batan I., Hatusima 28585 = *Cordia dichotoma* Forst. f.

EXCLUDED

Villaresia macrocarpa Scheff., Ann. Jard. Bot. Btzg 1 (1876) 13 = *Gonocaryum litorale* (Bl.) Sleum. — *Villaresia scandens* Hask., Nat. Tijd. N. I. 10 (1856) 152 = *Dichapetalum timoriense* (DC.) Boerl. — *Chariessa cauliflora* Pulle, Nova Guinea 8 (1912) 657 = *Pseudobotrys cauliflora* (Pulle) Sleum.

6. THE GENUS CODIOCARPUS HOWARD IN MALESIA

CODIOCARPUS

Howard, Brittonia 5 (1943) 53.

The genus is very close to *Medusanthera* Seem. Besides a rib of the endocarp parallel to either side of the ventral fleshy appendage (more faintly developed or absent in *Medusanthera*) there are some differences in the structure of the wood of the two genera, as far as known — the wood of *Codiocarpus andamanicus* (Kurz) Howard and that of *Medusanthera gracilis* (King) Sleum. not yet investigated — which at the moment prevent the unification of these genera without further documentation to evaluate whether these criteria are of generic or but specific value. The descriptions and figures of the pollen of both genera given by Dahl, J. Arn. Arb. 33 (1952) 267 & 269, show no essential differences.

The two species known are very close to each other in most vegetative and floral characters. The tentative key to these species given below is unsatisfactory.

1. Petiole 1—1.5 cm. Drupe 1.5—1.8 cm. Andaman & Nicobar Is. **C. andamanicus** (Kurz) Howard
1. Petiole (1.5—)2—2.5 cm. Drupe (1.8—)2—2.5 cm. Philippines (Mindoro, Palawan).

C. merrittii (Merr.) Howard

I. Codiocarpus merrittii (Merr.) Howard, Brittonia 5 (1943) 56, f. 2, f. 3, e—f (Wood-Anat.); Dahl, J. Arn. Arb. 33 (1952) 267, f. 47 & 47 A (Pollen). — *Stemonurus merrittii* Merr., Philip. J. Sc. 3 (1908) Bot. 240. — *Tylecarpus merrittii* (Merr.) Sleum., Notizbl. Berl.-Dahl. 15 (1940) 237. — *Medusanthera merrittii* (Merr.) Sleum., ditto (1941) 364.

PHILIPPINES. Mindoro: Pinamalayan, 100 m, *Merritt* 9915 (K; NY, cit. Howard, n.v.; PNH, syntype of *Stemonurus merrittii*, †; US, cit. Howard, n.v.); ibid., B.S. 40837 (A, n.v.; BO, K, P). — Palawan: locality not given, F.B. 21585 (BM, K, L, P); Aborlan, Sagpangan, 200 m, PNH 23051; Talakaigan R., PNH 13975; Iraan Mts, 50 m, PNH 12481; Brooke's Point, Addison Peak, Elmer 12622; Puerto Princesa, B.S. 29160 (P), F.B. 29253 (K); ibid., Mt. Inagawan, Ebalo 508 (UC); Mt. Pulgar, Elmer 12842; Bindoyan, Ebalo 609 (UC); Quezon, Bukal, PNH 91272; Balavac I., B.S. 27981, 49838 (UC), 77797.

7. A REVISION OF THE GENUS GOMPHANDRA WALL. EX LINDL.

For the preparation of this genus for 'Flora Malesiana' it appeared necessary to revise it in a submonographic way. This revision, however, turned out to remain highly unsatisfactory mainly due to the scarcity and incompleteness of specimens collected, the latter mainly a consequence of the dioecism of the genus. Many species have been described either from ♂ or fruiting specimens only, and their pertaining ♂ and/or ♀ flowers resp. fruits are not yet known. Vegetative characters, on the other hand, the variability or constancy of which is not fully clear in many species, are mostly not sufficient to discriminate species in a key. The key given here, a mixture of vegetative and floral characters, is not more than a compromise obtained with the materials available; only complete materials of a given species can be named with it. Future collectors should care for collections as complete as possible and with ample field notes.

GOMPHANDRA

Wall. [Cat. (1831) n. 3718, (1832) n. 7204, *nom. nud.*; in Roxb., Fl. Ind. ed. Carey & Wall. 2 (1824) 329, *nom. event.*] ex Lindl., Nat. Syst. ed. 2 (1836) 439; Wight, Ill. (1840) 102; Endl., Gen. (1840) 1043; Ench. (1841) 546; Reichb., Nom. (1841) 136; Benth., Trans. Linn. Soc. 18, 4 (1841) 679; Ann. Mag. Nat. Hist. 7 (1841) 215; Endl., Sp. Pl. 2 (1842) 82; Meisn., Comm. Arb. 21 (1940) 461; Lloydia 6 (1943) 144 ff.; Dahl, J. Arn. Arb. 33 (1952) 268 (Pollen). — *Platea* (*non* Bl.) Miers, Ann. Mag. Nat. Hist. II, 10 (1852) 108, p.p., repr. Contr. Bot. 1 (1852) 95, p.p. — *Lasian-*

thera (non P.B.) Miq., Fl. Ind. Bat. 1 (1856) 790, p.p.; Baill., Hist. Pl. 5 (1874) 329, p.p.; Becc., Malesia 1 (1877) 109, p.p.

Type species: *G. tetrandra* (Wall. in Roxb.) Sleum. (= *G. axillaris* Wall. ex. Bedd., based on *Wallich* 3718, mentioned by Lindley).

Note. For discussion of the generic name *Gomphandra* see under *Stemonurus*.

KEY TO THE SPECIES

1. Leaves persistently velutinous or tomentose all over the undersurface, soft to the touch (cf. also 8. *G. papuana*).
 2. Leaves (12—)14—28 by (5.5—)8—10(—11) cm, nerves 8—10 pairs. Petals 5—6 mm. Annam.
 1. *G. donnaeensis*
2. Leaves up to 20 by 8 cm, nerves 2—7(—8) pairs. Petals up to 4 mm.
 3. Nerves in 2(—3) pairs. Luzon 2. *G. fuliginea*
 3. Nerves in 4—7(—8) pairs.
 4. Petals outside short-tomentose in the upper third. Celebes. 3. *G. velutina*
 4. Petals outside glabrous or practically so.
 5. Leaves 12—20 by 4—7 cm, dark brown when dry. Tonkin, Yunnan. 4. *G. mollis*
 5. Leaves 9—12 by 2—4 cm, pale green when dry. Lower Burma. 5. *G. tomentella*
1. Leaves covered with scattered hairs underneath, ± glabrescent with age, or glabrous from the beginning.
 6. Ovary in the ♀ flower laxly to densely hairy. (Rudiment of ovary in the ♂ flower whether or not hairy.)
 7. Inflorescence conspicuously head-like, its branches (especially in the ♂ specimens) very short.
 8. Leaves elliptic or oblong-, rarely ovate-elliptic, 12—20 by 4—8 cm, nerves 5—6(—7) pairs.
 Drupe (1.8—)2—2.4 by (0.6—)0.7—0.8 cm. Sumatra (incl. Simalur I.), Malay Peninsula.
 6. *G. capitulata*
 8. Leaves oblong, rarely ovate-lanceolate, 5—8(—9) by 1.5—3 cm, nerves 3—4(—5) pairs. Drupe
 1—1.3 by 0.5—0.7 cm. Borneo (Mt Kinabalu) 7. *G. lysipetala*
7. Inflorescence (especially in the ♂ specimens) generally more loose, its branches distinct and divergent.
 9. Petals hairy in their upper part, 5—7(—10) mm. Rudiment of ovary in the ♂ flower hairy on top. Drupe 3.5—4 by c. 1.5 cm. New Guinea 8. *G. papuana*
 9. Petals glabrous or practically so, rarely up to 5 mm. Drupe much smaller.
 10. Both ♂ and ♀ inflorescences many-flowered, cymes together on top of a peduncle, 1.5—2 cm. (Rudiment of ovary in the ♂ flower glabrous.) Leaves coriaceous. Simalur I.
 9. *G. simalurensis*
10. ♂ Inflorescences rather many-, ♀ ones few-flowered, cymes together on top of a generally rather short peduncle. Leaves chartaceous to coriaceous.
 11. Leaves ± laxly covered underneath for a long time with appressed weak hairs, nerves 5—7 pairs.
 12. Rudiment of ovary in the ♂ flower with a tuft of hairs on top. Very base of drupe not swollen. Borneo, Philippines incl. Sulu Arch. 10. *G. cumingiana*
 12. Rudiment of ovary in the ♂ flower glabrous or practically so. Base of drupe swollen to almost apophysate for c. 1 mm. Simalur I. 11. *G. pseudojavonica*
11. Leaves practically glabrous from the beginning. (Rudiment of ovary in the ♂ flower glabrous.)
 13. Leaves with (5—)6—8 pairs of nerves. Base of drupe not swollen. Java, Bali, Lombok 12. *G. javanica*
 13. Leaves with 8—10 pairs of nerves. Base of drupe swollen. Sumatra.
 13. *G. fusiformis*
6. Ovary (and rudiment of ovary in the ♂ flower) glabrous or practically so.
 14. Filaments glabrous or practically so.
 15. Filaments widened upwards and relatively short, i.e. c. twice as long as are the anther cells. N. Queensland, Kai Is, New Guinea 14. *G. australiana*
 15. Filaments elongate-linear, at least 3 times as long as are the anther cells.
 16. Leaves coriaceous, 5—9 by 2—3(—3.5) cm. Stamens little or hardly exerted at anthesis. India, Ceylon 32. *G. coriacea*
 16. Leaves chartaceous to subcoriaceous, 8—18 by (3.5—)4—6(—7) cm. Stamens markedly exerted at anthesis. New Guinea 15. *G. pallida*

14. Filaments ventrally and/or dorsally hairy.
17. Filaments with short-clavate or papillose hairs which never surpass the anther cell.
18. Drupe (1.6—)1.8—2(—2.2) by 0.8—1 cm. Sumba, Flores, Wetar, Timor, Celebes, Moluccas 16. *G. mappioides*
18. Drupe, as far as known, 1.3—1.6 by 0.5—0.6 cm.
19. Leaves practically glabrous. Calyx ± obconical, entire, glabrous. Philippines (Mindanao, Negros;? Bohol) 17. *G. apoenensis*
19. Leaves ± densely short-pubescent all over the undersurface, especially at midrib and nerves. Calyx cup-shaped, dented, hairy. Philippines (Mindanao).
18. *G. flavigarpa*
17. Filaments with elongate-clavate ("glandular") or penicillate hairs (those from the connective often surpassing the anther cell).
20. Inflorescence very lax, peduncle and branches elongate, slender and rather few-flowered both in the ♂ and ♀ specimens. Philippines (Mindoro, Sibuyan) 19. *G. oligantha*
20. Inflorescence lax to dense, peduncle and branches relatively short at least in the ♂ specimens, generally many-, rarely few-flowered.
21. Petals ± densely appressedly hairy outside. New Guinea. 20. *G. sawiensis*
21. Petals sparsely hairy on top (in bud), or glabrous.
22. Drupe (2—)2.5—3(—4) cm long.
23. Inflorescence rather compact, umbelliform. Drupe fusiform, 0.5—0.6 cm Ø.
24. Leaves chartaceous to subcoriaceous, nerves 10—12 pairs. Sumatra.
21. *G. dolichocarpa*
24. Leaves coriaceous, nerves 5—6(—8) pairs. Andaman Is.
22. *G. comosa*
23. Inflorescence rather lax. Drupe obovoid- or oblongoid-ellipsoid, at least 0.8 cm Ø.
25. Leaves narrow-lanceolate, chartaceous to subcoriaceous, nerves 3(—4) pairs. Philippines (Luzon) 23. *G. lancifolia*
25. Leaves (obovate-) elliptic to oblong or lanceolate-oblong, ± coriaceous, nerves 4 or more pairs.
26. Leaves elliptic to obovate-elliptic. Philippines (Luzon, Mindoro, Marinduque, Panay, Palawan) 24. *G. luzoniensis*
26. Leaves elliptic to lanceolate-oblong. New Guinea, New Britain, New Ireland, Solomon and Santa Cruz Is 25. *G. montana*
22. Drupe 1—2 (rarely —2.2) cm long (if 9 mm or more Ø cf. 26. *G. montana*).
27. Inflorescence (at least in the ♂ specimens) rather compact, ± umbelliform, on peduncle up to 5 mm. Leaves ± chartaceous, nerves (8—)10—12(—14) pairs. Very base of drupe swollen and smooth. Sumatra.
26. *G. parviflora*
27. Inflorescence (at least in the ♂ specimens) with more laxly arranged and diverging branches, generally on peduncle longer than 5 mm.
28. Drupe ovoid- to oblongoid-ellipsoid, base generally swollen. Inflorescences (at least in the ♂ specimens) much-branched, generally many-flowered and distinctly scorpioid (i.e. flowers arranged on one side), rarely with fewer flowers and rather obscurely scorpioid.
29. Leaves dark to blackish brown in dry state, and rufous- to rusty-tomentellous on midrib and nerves beneath, as are the branchlets. Sumatra 27. *G. subrostrata*
29. Leaves green to greenish-brownish in dry state and practically glabrous beneath, as are the branchlets 28. *G. quadrifida* s. lat.
For the varieties follow the key:
30. Leaves oblong to elliptic-oblong, rarely elliptic or subovate-oblong, 10—15(—25) by 4—6(—11) cm, nerves (5—)6—8(—10, rarely more) pairs, ± markedly looping before the edge. Burma, Thailand, Cochinchina, Malay Peninsula, Sumatra incl. Mentawai I var. *quadrifida*
30. Leaves often smaller, nerves in (3—)4—5(—6) pairs.
31. Leaves with a pair of slightly suprabasal, high curved-ascendent 'melastomaceous' nerves, other nerves transverse to the midrib, faint or obscure. Sumatra, Malay Peninsula.
var. *triplinervis*

- 31. Leaves with more numerous, straight or more curved pairs of nerves subparallel to each other.
- 32. Leaves narrowly oblong-lanceolate, sometimes almost linear, 5—12(—18) by (0.5—)0.8—2 cm. S. Thailand, Malay Peninsula. var. *angustifolia*
- 32. Leaves lanceolate to oblong, rarely subovate-lanceolate, (4—)5—10(—14) by 2—4 cm.
- 33. Nerves ± spreading except the basal pair, generally obscurely looping before the edge. Annam, Thailand, Malay Peninsula . . var. *ovalifolia*
- 33. Nerves all steeply ascending, prominent and markedly looping before the edge. Malay Peninsula (Penang) var. *maingayi*
- 28. Drupe, as far as known in mature state, oblongoid-ellipsoid, base broadly attenuate, not swollen. Inflorescences never scorpioid.
- 34. Leaves brittle and blackish in dry specimens, nerves and veins ± obscure on both faces. Inflorescence with red brown hairs. New Guinea. 29. *G. schoepfii*
- 34. Leaves hardly or not brittle and greenish-brownish, rarely blackish in dry specimens, nerves and veins generally more visible. Inflorescence with paler, mostly yellowish hairs.
- 35. Apex of drupe shortly and ± abruptly narrowed, often curved into a kind of beak. Mature leaves with a finely impressed reticulation above. New Guinea . . 30. *G. pseudoprasina*
- 35. Apex of drupe broadly and gradually narrowed, or rounded, never beaked. Mature leaves showing no impressed reticulation above.
- 36. Leaves membranous to chartaceous. Ceylon, India, Indo-china, Burma, Thailand, China incl. Hainan.
- 36. Leaves coriaceous. Ceylon, India. . . . 32. *G. coriacea*

1. *Gomphandra donnaiensis* (Gagnep.) Sleum., comb. nov. — *Lasianthera donnaiensis* Gagnep., Fl. Gén. I.-C. Suppl. (1948) 744.

INDOCHINA. Annam: Ht. Donnai, entre Dankia et Yanglô, Poilane 23467 (BO, P); P. sapoum, au S de la station agr. de Blao, Poilane 22016 (K; P, type of *Lasianthera donnaiensis*); Col de Braian, 1000—1100 m, Poilane 24306 (P), 24515 (K, P).

Note. Close to and possibly conspecific with *G. mollis* Merr.

2. *Gomphandra fuliginea* (Elm.) Merr., En. Philip. 2 (1923) 490. — *Urandra fuliginea* Elm., Leafl. Philip. Bot. 2 (1908) 491. — *Stemonurus fuligineus* (Elm.) Howard, J. Arn. Arb. 21 (1940) 468 ('*fulgineus*').

PHILIPPINES. Luzon: Benguet, Baguio, Elmer 8620 (A, n.v.; BO, E, FI, G, K, L; PNH, type of *Urandra fuliginea*, †; WRSL); ibid., Williams 1270 (cit. Merrill, n.v.).

3. *Gomphandra velutina* Sleum., sp. nov.

Arbor c. 10 m alta. *Ramuli* graciles fulvo-velutini. *Folia* lanceolata usque oblonga, apice breviter acute acuminata, basi cuneata vix inaequilateralia, in sicco saturate brunnea, chartacea, supra glabra, subtus fulvo-ferrugineo-velutina, 12—17 cm longa, (3—)4—6 cm lata, nervis utroque latere 6—7(—8) leviter arcuatis, supra levissime immersis, subtus parum elevatis; petioli velutini, 8—13 mm longi, 1.5 mm crassi. *Flores* ♂ capitula e cymis valde abbreviatis composita, c. 15-flora, pedunculo c. 5 mm longo imposta petalisque exceptis ubique fulvo-tomentosula formantes, vix 1 mm longe pedicellati. Calyx cupulatus, 2.5 mm altus. Petala 5, in tubum campanulatum irregulariter fissum in superiore

tertio extus tantum tomentellum connata, 4.5—5.5 mm longa, tubo ore 4.5 mm diam. Stamina 5, vix exserta; filamenta antice infra antheras dorsoque apice tantum albo-barbata. Ovarii rudimentum apice erecto-pilosum. *Flores* ♀ in capitulis 3—4-floris pedunculatis dispositi, calyce petalisque ut in fl. ♂. Staminodia 5, crassa, apice barbata. Ovarium breviter tomentosum. *Drupa* ignota.

CELEBES. Central eastern part: Mengkoka Mts, Porema, 1200 m, fl. 28-10-1929, Kjellberg 2683 (BO; L, type; S).

Nota. Ut videtur *G. papuanæ* proxima.

4. Gomphandra mollis Merr., J. Arn. Arb. 23 (1942) 175; Wu & Wang, Act. Phytotax. Sin. 6 (1957) 279. — *G. tonkinensis* Gagnep., Not. Syst. 13 (1947) 134; Fl. Gén. I.-C. Suppl. (1948) 752. — *Stemonurus mollis* (Merr.) Howard in Dahl, J. Arn. Arb. 33 (1952) 269; Dahl. l.c. 269 (Pollens).

INDOCHINA. 9. Gomphandra simalurensis Sleum., sp. nov.

Arbor 13—25 m alta, Ramuli validi, apicibus tantum laxe appresse pilosi. Folia elliptica, rarius subobovato-elliptica, apice breviter obtuse acuminata, basi in petiolum attenuata paulloque decurrentia, coriacea, in sicco saturate brunnea, supra laevia, subtus opaca, novella subtus ad costam laxissime brevissime pubescentia, matura glabra, 10—17(—21) cm longa, (4—)4.5—9(—11) cm lata, costa supra leviter impressa, subtus bene prominente, nervis lateralibus 5—6(—7)-paribus, inferioribus sat stricte, superioribus curvatim ascendentibus, supra fere planis, subtus elevatis, venis transversis laxis subtus prominulis vel subobscursis; petiolus 1—1.8(—2.3) cm longus, c. 2.5 mm crassus, in sicco corrugatus. Inflorescentiae ♂ et ♀ e cymis 3—5 multifloris pedunculo communi sat gracili 1.5—2 cm longo impositis formatae, petalis exceptis pallide ferrugineo-tomentellae, singulae vel binae, haud raro etiam ex axillis defoliatis ortae, totae 2.5—3.5 cm longae. Flores ♂: Calyx cupularis, ciliatus, 4(—5)-denticulatus, sparse pubescens, 1 mm altus. Petala 4 vel 5, sub anthesi in tubum orem versus dilatatum breviter 4-vel 5-lobatum connata, alboviridia, 4.5 mm longa. Stamina 4 vel 5, valde exserta; filamenta antice infra antheras laxe pilis elongato-clavatis adspersa, dorso ad connectivum penicillata. Ovarii rudimentum basi gibbosum, glabrum. Flores ♀: Calyx et petala ut in fl. ♂. Staminodia 4 vel 5. Ovarium cylindricum, ipsa basi glabrum, ceterum dense pilis prorsus versis hirsutulum. Drupa oblongoidea, parum obliqua paulloque rostrata, pallide lutea, 1.6—1.8(—2) cm longa, 0.7—0.8 cm diam., endocarpio longitudinaliter 10—12-costulato.

13. *Gomphandra fusiformis* Sleum., sp. nov.

Arbuscula 3 m alta, trunco 2—4 cm diam. Ramuli gracillimi, apicibus brevissime

appresse fusco-pilosi. *Folia* oblonga, apice per 1—2 cm subabrupte angusteque acuminata (apice ipso saepius curvato et obtusiusculo), basi in petiolum cuneata, chartacea, in sicco plumbeo-viridia parum brunnescens, opaca, glabra, 8—13 cm longa, 2.5—3.5 cm lata, nervis lateralibus 8—10-paribus (pare infimo suprabasali alte curvato-ascendente, cum paribus superioribus angulo latiore a costa abeuntibus strictioribus interque sese curvato-conjunctis in nervum intramarginalem confluentibus), subtus vix prominulus; petioli 6—10 mm longi, c. 1 mm crassi. *Inflorescentiae* ♂ cymis 1 vel 2 paucifloris formatae, graciliter et 1 cm longe pedunculatae, brevissime pubescentes. *Calyx* cupularis, minute 4-denticulatus, ciliatus, 1 mm altus. *Petala* 4, per 3/4 long. in tubum subcampanulato-dilatatum connata, glabra, albida, 3.5 mm longa. *Stamina* 4 breviter exserta; filamenta parte ventrali superiore penicillata. *Ovarii rudimentum* glabrum. *Inflorescentiae* ♀ ad cymam paucifloram fere umbellatam breviter pedunculatam reductae. *Calyx* et *petala* ut in fl. ♂. *Staminodia* 4, parce penicillata. *Ovarium* basi glabra excepta dense breviter appresse ferrugineo-pilosum. *Drupa* fusiformis, apicem versus subabrupte rostrato-attenuata, basin versus sensim attenuata, ima basi paulo cupuliformi-inflata ibique laevis, ceterum costis longitudinalibus endocarpii obtusis percursa, (2—)2.3—2.5 cm longa, medio 6(—7) mm diam.

SUMATRA. Westcoast: Mt Sago near Pajakumbuh, 1000 m, fl. ♀, *Maradjo* c.s. 121 (L, type); *ibid.*, Bukit Tjempago, 900—1000 m, fl. ♂, *Meijer* 4066 (L, SING); N. slope of Mt Sago, 900—1200 m, fr. mat., *Meijer* 3706 (BM, BO, L); *ibid.*, ravine of Batang Lakin, 900 m, fr. mat., *Meijer* 5630 (A, n.v.; L).

14. Gomphandra australiana F. v. M., *Phyt. Austr.* 6 (1867) 3; *Valet.*, *Crit. Overz. Olacinae* (1886) 226, pl. 4, f. 20 a—h, pl. 5, f. 23 b; *F. M. Bailey*, *Compr. Cat. Q. Pl.* (1913) 93; *White*, *Proc. R. Soc. Queensl.* 53 (1942) 212. — *G. axillaris* (*non* Wall.) *Becc.*, *Malesia* 1 (1877) 110, *pr. specim. papuan.*: t. 4, f. 8—13. — *Stemonurus australianus* (F. v. M.) *O. Ktze*, *Rev. Gen. Pl.* 1 (1891) 112. — *G. polymorpha* (*non* Wight) *F. M. Bailey*, *Queensl. Bot. Bull.* 8 (Dep. Agric. Brisbane, 1893) 71; *Compr. Cat. Q. Pl.* (1913) 93. — *Stemonurus ramuensis* *Laut.* in *K. Sch. & Laut.*, *Nachtr.* (1905) 305; *Schellenb.*, *Bot. Jahrb.* 58 (1923) 163; *Birnie*, *Nova Guinea* 14, 2 (1926) 275. — ? *Stemonurus viridis* *Schellenb.*, *Bot. Jahrb.* 58 (1923) 163. — *G. ramuensis* (*Schellenb.*) *Sleum.*, *Notizbl. Berl.-Dahl.* 15 (1940) 238. — ? *G. viridis* (*Schellenb.*) *Sleum.*, l.c. 239.

Note 1. From *Stemonurus viridis* *Schellenb.* only the lectotype specimens with young quite glabrous fruits are still preserved. The hairiness of branchlets and leaves remembers that of *G. papuana*, whilst the form of the leaves and the venation are more or less the same as found in *G. australiana*. A second collection (*Ledermann* 10859) with ♂ flowers is lost.

Note 2. The leaves of *G. australiana* resemble those of *G. montana*, but are generally more coriaceous. The drupe of these species can hardly be discerned, as far as can be seen from dried materials.

AUSTRALIA. North Queensland: Rockingham Bay, *Dallachy* (BM, BO, G, FI, K, L; MEL, n.v.). — In Queensland apparently limited to the North Kennedy and Cook Dist.

KAI Is. *Jaheri* 363 & 373 (BO, L).

Note. *Gomphandra quadrifida* and *G. prasina* are treated in this paper for the first time as belonging to the same species. I have preferred to use the epithet *quadrifida* and not *prasina* (a name transferred to *Gomphandra* before) because the type specimen of *Stemonurus quadrifidus* has flowers and young fruits, whilst that of *S. prasinus* is sterile. The type specimen of *S. prasinus* was collected by Korthals in the Padang Highlands, and it is reasonable to accept that his materials, which form the basis of *S. quadrifida*, also came from this area.

Valeton, Crit. Overz. Olac. (1886) on p. 277 in the text to pl. 4, f. 19 a—d mentions 'G.' *quadrifida*, but this cannot be regarded as a combination of *Stemonurus quadrifidus* to *Gomphandra*, the more as *Stemonurus quadrifidus* on p. 223 is cited as a synonym of *Gomphandra penangiana*.

var. *quadrifida*.

BURMA. Lower Burma: Moulinain, Lobb (K, P); Three Pagodas, c. 40 km N. of Wangka, 280 m, Kostermans 429. — Mergui, Parker 2631, Sukoe 7740; E. Tenasserim, 50 m, Kerr 21646 (K).

Arb. 33 (1952) 269; Dahl, l.c. 269 (Pollen). — *Stemonurus oppositifolius* [non (Pierre ex Gagnep.) Howard] Dahl, J. Arn. Arb. 33 (1952) 268 (Pollen).

A widespread species, variable as to form and size of the leaves and to the degree of hairiness of the filaments, though fairly constant in other flower and fruit characters. Drupe oblongoid-ellipsoid, 1.2—1.5(—2) by 0.5—0.8 cm, not or slightly swollen at base. Whether specimens with smaller fruits, as found in Hainan, represent a proper species, is doubtful.

CEYLON. From the sea level to 1200 m, Macrae 10 (K), Walker 144 (K), Thwaites C.P. 251, etc.

INDIA. Western Peninsula from the Concan southwards, Wight K.D. 428 (C; K, lectotype of *G. polymorpha* and type of *G. polymorpha* var. *angustifolia*; L), 429 (A, n.v.; K, type of *G. polymorpha* var. *acuminata*; L), 430 (C; K, type of *G. polymorpha* var. *oblongifolia*; L, P), Wight s.n. (K, type of *G. polymorpha* var. *longifolia*), Wight s.n. (K, type of *G. polymorpha* var. *ovalifolia*); Nilgherries, Wight t. 953 (cit. '53), type of *Platea wightiana*; Madras Presidency, etc. — Assam: Sylhet border, M.R. Smith (type of *Lasiandra tetrandra*, probably preserved in CAL, n.v.); Sylhet, Wallich 3718 (CGE; K, type of *G. axillaris*), 6780, 6782 B (CGE; K, type of *Stemonurus longifolius*). — Khasia: Hooker f. & Thomson, Griffith, etc.

BURMA. Lower Burma: Amherst, slopes of Mulayit, 1430 m, Parkinson 5124 (K).

INDOCHINA. Tonkin: Lao-kay, Cha pa, 1600 m, Chevalier 29396, Pételot 4463, 5450 (A, n.v.; P, syntype of *G. hainanensis* var. *latifolia*), 6360 (A, n.v.; P, lectotype of *G. hainanensis* var. *latifolia*); Taai Wong Mo Shan, W. T. Tsang 29355, 29579, 30111; Sontay, Mt Bavi, Balansa 3134, 3192, Pételot 2647 (A, type of *G. petelotii*, n.v.; P); Phuong-lam, Balansa 3890 p.p. T. Tsang 26934, 26943, 27254. — Laos: prov. Tran-ninh, Poilane 20122; Chienkwang, Pu Mutin, 1700 m, Kerr 21138 (K; P; ibid., 1500 m, Kerr 21154 (K, L; P, type of *G. kerrii*)). — Annam: Quang-tri, Massif de Dong-co-pat, Poilane 11156; Dent du tigre, Poilane 10283; Thua-thien, Nui Bach-ma près Hué, Poilane 27600, 27628, 27655, 29232, 29645, 31151, 31197; Quang-nam, S.O. de Tramy, Poilane 31377 (P, syntype of *G. annamensis*); village de Go-oi, Poilane 31500 (A, n.v.; K, P, syntype of *G. annamensis*), 31709; Manglum, Poilane 31969; poste 6, Poilane 29590 (P, syntype of *G. annamensis*); Tourane, Mt Bana & Col de Nuages, Clemens 3861 (fl. ♂: A, n.v.; BM, K, L; P, lectotype of *G. annamensis*; U), 3867 (fl. ♀: K; P, syntype of *G. annamensis*), 4224 (K), Poilane 7117, 7174, 7362, 7746, 7997, 8124, 29004, 29136, 29232; Nhatrang, Phu ha, Poilane 5293 (P, syntype of *G. annamensis*). — Cambodge: Montagne de l'Eléphant, Poilane 229 (A, n.v.; P, syntype of *G. camchayensis*), 337 (P, lectotype of *G. camchayensis*); Kampot, Mt Kamchay, Pierre 5202 (P, type of *G. cambodiana*).

CHINA. Kweichow: Gam-go, c. 2100 m, Esquirol 6399 (P). — Kwangsi: R.C. Ching 5226 (A, n.v.; WU, type of *Stemonurus chingianus*, n.v.). For further localities see: Chun, l.c. 229; Wu & Wang, l.c. 278. — Yunnan: Henry 10492, 10738, 11273, 13007 (all at K). For further localities see: Wu & Wang, l.c. 278. — Hainan: 700 m, McClure 8546 (A, n.v.; BM, C, E, G, K, P; PNH, type of *G. hainanensis*, †), 9464, 9570, Henry 10492, Chun & Tso 43878, F.C. How 70388, 72089, S.K. Lau 127, 377, 450, 3560, 3713, H.Y. Liang 61734, 63148, 63587, 64409, 64500, 64705, 64743, 64793, 65188, W.T. Tsang 22204, 22686, C. Wang 33311, 34309, 35030, 36552. — For further localities see Chun & How, l.c. 58; Wu & Wang, l.c. 278.

THAILAND. Payap: Chiengsén, Mê Chan, 400 m, Kerr 5141. — Maharat: Doi Wao near Nan, 690—750 m, Kerr 2430 (K, syntype of *G. pauciflora*), 2433, 2435 (E; K, lectotype of *G. pauciflora*). — Rachaburi: Kao Ri Yai, 1400 m, fr., Kerr 10410 (K).

32. *Gomphandra coriacea* Wight, Ill. 1 (1840) 103; Walp., Rep. 1 (1842) 378; Bedd., Fl. Sylv. 3 (1871) LXI, Anal. Gen. t. IX, f. 4; Becc., Malesia 1 (1877) 109, t. 4, f. 1—7; Valet., Crit. Overz. Olacin. (1886) 222; Trimen, Handb. Fl. Ceylon 1 (1893) 261; Gamble, Fl. Pres. Madras 1 (1915) 195. — *G. polymorpha* Wight, Ill. 1 (1840) 103 p.p. et auct. div. — *Stemonurus coriaceus* (Wight) Miers, Ann. Mag. Nat. Hist. II, 10 (1852) 37, repr. Contr. Bot. 1 (1852) 87; O. Ktze., Rev. Gen. Pl. 1 (1891) 112. — *Stemonurus gardneri* Miers, Ann. Mag. Nat. Hist. II, 10 (1852) 38, repr. Contr. Bot. 1 (1852) 89, pl. 13/2. — *Stemonurus walkeri* Miers, l.c. 43, resp. 93, pl. 14/2. — *Platea coriacea* (Wight) Thwait., En. Pl. Zeyl. (1858) 44.

CEYLON. Walker s.n. (fl. ♂: BM; K, syntype of *Stemonurus walkeri*), Gardner 101 & 101 bis (fl. ♀: K, lectotype of *Stemonurus walkeri*), Thwaites C.P. 375, etc.

INDIA. Western Peninsula, Pulneys, Wight K.D. 427 (A, n.v.; C, Fl; K, type (or lectotype?) of *G. coriacea*; GH, n.v., pollen investigated by Dahl, J. Arn. Arb. 33, 1952, 268; L, P, S), 433 (A, n.v.; C, K, L, P); Nilgherries, Gardner s.n. (BM; K, lectotype of *Stemonurus gardneri*), etc. — Madras Presidency?

Note. Possibly only a montane variety or form of *G. tetrandra* with more coriaceous leaves and not rarely glabrous filaments.

Imperfectly known

33. *Gomphandra oblongifolia* Merr., Philip. J. Sc. 17 (1920) 276; En. Philip. 2 (1923) 491. — *G. sorsogonensis* Elm., Leafl. Philip. Bot. 10 (1939) 3748. — *Stemonurus oblongifolius* (Merr.) Howard, J. Arn. Arb. 21 (1940) 469.

PHILIPPINES. Luzon: Camarines, fr., F.B. 27423 (SING, UC); Camarines Norte, Paracale, fr. juv., B.S. 33727 (A, n.v.; K; PNH, type of *G. oblongifolia*, †), F.B. 27406 (A, n.v.; K); Camarines Sur, Lagunoy, F.B. 21103 (cit. Merrill, PNH, †); Sorsogon, Irosin, Mt Bulusan, Elmer 15295 (A, n.v.; BM, BO, C, Fl, K, L, P; PNH, type of *G. sorsogonensis*, †; S, U), 15650 (distr. as *Urandra leyteensis*, PNH 2722 (fr.), 38543 (fr.). — Catanduanes: B.S. 30258 & 30355 (PNH, †), B.S. 75422 (SING, U, UC). — Mindanao: Davao, Mati, B.S. 49621 (distr. as *G. flavicarpa*: P, SING, UC).

INCOMPLETE MATERIALS STUDIED BUT LEFT WITHOUT SPECIFIC DETERMINATION

Gomphandra sp.

SUMATRA. Enggano I.: Lütjeharms 4108, 4931, 4933, sterile & fr. submat. (BO, L, P).

Gomphandra sp.

Lingga Arch. Lingga I.: Bukit Sipientjan, Teymann H.B. 6709 (BO, L); Bukit Uwan Pelo, Teymann H.B. 6707, 6708 (BO, L), cf. Valet., Crit. Overz. Olacin. (1886) pl. 4, f. 18 a & b; P. Singkep, 60 m, Bünnemeijer 7181 (BO). — All these possibly aff. *G. quadrifida* (Bl.) Sleum. var. *ovalifolia* (Ridl.) Sleum.

Gomphandra sp. nov. ?

SUMBAWA. Western part: Mt Batulanich, in moist Dipterocarp forest, 500—900 m, fl. ♂ juven., fl. ♀ & fr. submat., Kostermans 18321, 18328, 18479, 18738, 19173. — Possibly close to *G. javanica* (Bl.) Valet.

Gomphandra sp.

FLORES. Ruteng Mts, 1200 m, frequent tree with markedly erect branches and leaves, sterile, de Voogd 1793 (BO, L).

Gomphandra sp.

BORNEO. Western part: Kapuas R., Biang Mts, sterile, Teyssmann H.B. 8455 (L). — Cited erroneously by Valeton, Crit. Overz. Olacinae (1886) 218, and Merrill, En. Born. (1921) 356, sub *G. parviflora* (Bl.) Valet., a species not yet known from Borneo.

Gomphandra sp.

BORNEO. Central part: W. Kutei, near Long Petah, 550 m, fl. ♂ or galled, Endert 3125 (BO, K, L).

Gomphandra sp.

BORNEO. Sarawak: 4th Div., Baram, Entoyut R., Hose 375 (BM, K), 455 (BM, K, L), 700 (BM, L); Baram R., Hose 154 (BM, K, L). — These specimens are cited by Ridley, Kew Bull. (1931) 35, erroneously sub *G. javanica* (Bl.) Valet.

Gomphandra sp.

BORNEO. Sarawak: 4th Div., Ulu Melinau, Baram, Ashton BRUN 3232 (BO, K, L).

Gomphandra sp. nov. — *G. aff. comosa* Anderson, Gard. Bull. Sing. 20 (1963) 166.

BORNEO. Sarawak: 2nd Div., Betung, Saribas F. R., in peat swamp forest, fr. mat., Anderson S 8517 (BO, K, L, SAR); Triso P. F., sterile, Anderson S 3166, 14502, 14539 (SAR); 3rd Div., Pulau Brui, in centre of island, peat swamp forest, Anderson S 7914 (BO, K, L, SAR, SING); 4th Div., Sg. Dua, Baram, sterile, Anderson S 4189.

Gomphandra sp.

BORNEO. Sarawak: 5th Div., Limbang, Haviland 777 (K, SAR, SING). — Reminds of both *G. parviflora* (Bl.) Valet. and *G. quadrifida* (Bl.) Sleum. in leaf-characters.

Gomphandra sp.

BORNEO. Sarawak: 5th Div., Lawas, Brooke 9963 (BM, L).

Gomphandra sp.

BORNEO. Brunei: Seria Dist., fl. ♂ juven., Hotta 12640 (L).

Gomphandra sp.

BORNEO. Brunei: Temburong, N. slopes Bukit Patoi, 50 m, fr., SAN 17150 Smythies, Wood & Ashton (BO, L, SING).

Gomphandra sp.

BORNEO. N. Borneo: Mt Kinabalu, Kadamaian R., 1370 m, fr., Haviland 1243 (K). — Published as *G. ? prasina* Becc. by Staph, Trans. Linn. Soc. II, Bot. 4 (1894) 139, but certainly not that species.

Gomphandra sp.

BORNEO. N. Borneo: Mt Kinabalu, 1370—1525 m, Clemens 32260 (fr.: BM, L), 32597 (BM, BO, G, L), 50307 (fl. ♂: BM, G, K, L).

Gomphandra sp.

BORNEO. N. Borneo: Mt Kinabalu, 1525 m, Clemens 32590 (BM, BO, L). — In this specimen the petals are free to the base as in *G. lysipetala* Staph.

Gomphandra sp.

BORNEO. N. Borneo: Mt Kinabalu, 2135—3000 m, Clemens 31997 (fr. mat.: BM, BO, G, K, L), 35029 (BM).

Gomphandra sp.

BORNEO. N. Borneo: Mt Kinabalu, Clemens 35028 (BM, L); Lobang, fr., Clemens 10321 (L); Penibukan, 1000—1980 m, Clemens 30487 (BM, L), 35031 (fr.: BM, L), 40477 (BM, G, L), 40937 (BM, K), 50013 (fl. ♀: BM, G, K); Tenompok, 1525 m, Clemens 28114 (fr.: BM, BO, G, L), 28226 (fl. ♀: BM, BO, L), 28365 & 28365 A (BM, BO, G, K, L); Dallas, 900—1200 m, Clemens 26148 (BM, BO, G), 26254 (BM, K, L), 27548 (BM, G, K). — Related apparently to *G. cumingiana* (Miers) F.-Vill.

Gomphandra sp.

BORNEO. N. Borneo: Mt Kinabalu, 1525 m, Clemens 32341 (BM, L), 32462 (fr. mat.: BM, BO, G, K, L), 34030 (BM, L). — These specimens have practically glabrous filaments.

Gomphandra sp.

BORNEO. N. Borneo: Mt Kinabalu-Sosopodon, Ranau road, 1400 m, fl. ♀, SAN 33713 (K, SAN).

Gomphandra sp.

BORNEO. N. Borneo: Mt Kinabalu, Ulu Kagitang, 1220 m, fr., SF 26788 Carr (SING).

Gomphandra sp.

BORNEO. N. Borneo: Sosopodon near Kundasang, 1220 m, fr., SAN 47950 (K, L).

Gomphandra sp.

BORNEO. N. Borneo: Tambunan, Trusmadi F. R. above Koingaran R., 1675—1830 m, SAN 41751 (K, L, SAR), 44333 (K, L, SAN).

Gomphandra sp.

BORNEO. N. Borneo: Bukit Malawali, Labuk road, 240 m, fr. submat., SAN 46666 (K).

Gomphandra sp.

BORNEO. N. Borneo: Sandakan, Sepilok F. R., Dj. Kabilis, Cpt. 13, fl. ♂, SAN 34312 (K). — In Dipterocarp forest.

Gomphandra sp.

BORNEO. N. Borneo: Sandakan, Kinabatangan, Bukit Tingka, 670 m, on ultrabasic soil, fr., SAN 23286 (K).

Gomphandra sp.

PHILIPPINES. Dinagat I.: fr., B.S. 35264 Ramos & Pascasio (BM, K, L, P).

Gomphandra sp.

PHILIPPINES. Alabat I.: fl. ♀, B.S. 10495 Merrill (L).

Gomphandra sp.

PHILIPPINES. Samar: Mt Cansayo, fl. ♀ & fr., PNH 14345 (K, L), 14592 (L).

Gomphandra sp.

PHILIPPINES. Biliran I.: Mt Suiro, 530 m, PNH 21575 (L).

Gomphandra sp.

PHILIPPINES. Leyte: Palo, fr., Elmer 7192 (BO, L). — According to Elmer, Leafl. Philip. Bot. 7 (1915) 2693, matching *G. cumingiana* (Miers) F.-Vill., which I doubt. Distributed as *Urandra leytenensis* Elmer ms.

Gomphandra sp.

PHILIPPINES. Luzon: Mountain Prov., Ifugao, Banaue, 1220 m, fr., PNH 79571 (K, L).

Gomphandra sp.

PHILIPPINES. Luzon: Nueva Vizcaya Prov., Caraballo Mts, Loher 13660 (UC).

Gomphandra sp.

PHILIPPINES. Luzon: Bataan Prov., Lamao R., Mt Mariveles, F.B. 1199 Borden (BM).

Gomphandra sp.

PHILIPPINES. Luzon: Batanes Prov., Batan I., B.S. 79973 & 80643 Ramos (K). — Maybe related to *G. luzoniensis* (Merr.) Merr.

Gomphandra sp.

PHILIPPINES. Luzon: Tayabas, Mt Pular, B.S. 19415 (K, P).

Gomphandra sp.

PHILIPPINES. Luzon: Laguna, F.B. 24672 Amarillas (L).

Gomphandra sp.

PHILIPPINES. Mindanao: Mt Apo, Todaya, fr., Williams 2582 (K). — Cited by Merrill as *G. flavicarpa* (Elm.) Merr.

Gomphandra sp.

NEW GUINEA. Northern part: Hollandia, 100 m, fr. submat., BW 5541 v. d. Sijde (K, L). — Leaves finely reticulate on both faces.

Gomphandra sp. (aff. *G. australis* F. v. M. ?)

NEW GUINEA. Mussau I.: Koie & Sandermann Olsen 1569 (C). — Western part: Bernhard Camp, Idenburg R., 750 m, sterile, Brass & Versteegh 13199 (L). — Eastern part: Eastern Highlands, near Sassaara, 1675 m, Hartley 12004 (L); Madang Dist., Ramu R. valley near Faita airstrip, 180 m, Saunders 300; Normanby I., 15 m, fr. immat., NGF 8610 (K, L); Misima I., 300 m, fr. immat., Brass 27504 (K, L); Woodlark I., 100 m, fr. immat., Brass 28742 (K, L).

Gomphandra sp.

NEW GUINEA. Eastern Highlands: Kassam Gap, 1460 m, Brass 32295 (K, L).

Gomphandra sp.

NEW GUINEA. Northern Dist.: Dobodura, fr. immat., NGF 2047 (L).

Gomphandra sp. nov.

NEW GUINEA. Morobe Dist.: Gully due North of Wagau airstrip, 1220 m, fr. mat., NGF 17882 (K, L); Wau-Salamaua road, near Skindeway, 1665 m, fr. mat., NGF 8465 (K, L).

Gomphandra sp.

NEW GUINEA. Morobe Dist.: Bulolo, Upper Rifle R.a., 1220 m, fr., NGF 27923.

Gomphandra sp.

NEW BRITAIN. Talasea, NE. ridge of Mt Penck, 150 m, NGF 26730 (L). — The petals are free from each other in this specimen.

EXCLUDED

Gomphandra ? *crassipes* (Kurz) Mast. in Hook. f., Fl. Br. Ind. 1 (1875) 587; Valet., Crit. Overz. Olacinae (1886) 229. — *Stemonurus* ? *crassipes* Kurz, J. As. Soc. Beng. 41, ii (1872) 298; O. I (1875) 589.

Type species: *G. gracile* Miq.

KEY TO THE SPECIES

1. Petals of the ♂ flowers almost free or united below up to the middle, cup-like expanded. Anthers as long as or longer than filaments. Drupe as far as known without a distinct abortive loculus¹⁾, reddish to orange at maturity; exocarp thick, almost exclusively spongyous.
 2. Petals of the ♂ flowers almost free, smooth inside, c. 2 mm. Malay Peninsula (Selangor).
 - 1. *G. crassifolium***
 2. Petals of the ♂ flowers united below to $\frac{1}{2}$ — $\frac{1}{3}$ their length, with papillose emergences all over the inside, (4—)5—6 mm. Timor, Tanimbar Is., Celebes, Moluccas, Aru & Kai Is., New Guinea, New Britain.
 - 2. *G. litorale***
1. Petals of the ♂ flowers united below to about $\frac{1}{3}$, forming a tube, not papillose inside. Filaments distinctly longer than the anther cells. Drupe with a distinct abortive loculus (round in cross-section), dark green to olivaceous or turning blackish at maturity; exocarp rather thin, spongyous or predominantly fibrous.
 3. Leaves suddenly narrowed at apex for c. 2 cm by 3—4 mm (at base), tip subacute, nerves, and generally also veins, much impressed above, sharply raised beneath. Mature drupe acuminate, tip acute, longitudinal ribs numerous and \pm sharply outstanding. Borneo
 - 3. *G. impressinervium***
 3. Leaves less distinctly or shortly acuminate-attenuate at apex, tip \pm bluntness, nerves whether or not impressed above, veins but slightly or not so. Mature drupe short-apiculate or obtuse at apex, longitudinal ribs few to rather numerous and \pm obtuse, prominent or not.
 4. ♂ Spikes solitary in general. Mature drupe obtusely trigonous in cross-section.
 5. Spikes (both ♂ and ♀) generally elongate, up to 30 cm. Leaves (6—)8—18(—20) by 3.5—6.5 (—9.5) cm, greyish green in dry specimens. Petals 5—6 mm. Sumatra, Malay Peninsula.
 - 4. *G. gracile***
 5. Spikes (both ♂ and ♀) relatively short, up to 6 cm. Leaves 6—12 by 3—4(—5) cm, usually yellowish green especially beneath in dry specimens. Petals c. 4 mm. Borneo (Sarawak, Brunei, W. part of N. Borneo)
 - 5. *G. minus***
 4. ♂ Spikes in general several in a fascicle, or flowers glomerately arranged. Mature drupe \pm round in cross-section.
 6. Drupe ovoid or rarely ellipsoid-subovoid, green at maturity, with several obtuse, prominent, longitudinal ribs. N. & E. Borneo, Philippines, Sulu Arch.
 - 6. *G. cognatum***
 6. Drupe oblongoid to ellipsoid or rarely subovoid-ellipsoid or -oblongoid, dark olivaceous to \pm blackish at maturity, longitudinal ribs few to numerous, little or hardly prominent.
 7. Ovary in the ♀, resp. rudiment of ovary in the ♂ flower glabrous. Leaves 15—20(—25) by (5—)6—10(—14) cm, lateral nerves generally slightly impressed above, reticulation rather weakly or not prominent above. Drupe (1.5—)2—2.5 (rarely —3) by 1—1.5 cm; exocarp 1—2 mm; endocarp thin. Sumatra, Borneo.
 - 7. *G. macrophyllum***
 7. Ovary in the ♀, resp. rudiment of ovary in the ♂ flower densely to more sparsely hairy. Lateral nerves of leaves not impressed above. Drupe larger in general.
 8. Leaves markedly finely and densely prominent-reticulate on both faces, or at least above. Exocarp plus endocarp of well developed drupes 1—2 mm. S. Taiwan, Philippines, Celebes (Gorontalo), S. Borneo, Moluccas
 - 8. *G. calleryanum***
 8. Leaves rather obscurely or not prominent-reticulate above, never so beneath. Exocarp plus endocarp (2—)3—4 mm in well developed drupes. Burma, Thailand, Indochina, Hainan, Malay Peninsula (Perlis), S. & SE. Borneo.
 - 9. *G. lobbianum***

I. *Gonocaryum crassifolium* Ridl., J. Str. Br. R. As. Soc. 75 (1917) 18; Fl. Mal. Pen. I (1922) 432.

MALAY PENINSULA. Selangor: Sempang Mines, Ridley 15695 (BM; K, type; L, phot.).

5. *Gonocaryum minus* Sleum., sp. nov.

Arbuscula usque ad 12 m alta, trunco usque ad 12 cm diam., cortice laevi vel minute fiso, viridi-griseo usque saturate brunneo. Ramuli obtusanguli, sub lente puberuli, cito glabri, gracillimi. Folia elliptico-oblonga, 0.5—1.5 cm longe subcaudato-acuminata, apice ipso obtusa, basi late cuneata vel obtusa, subcoriacea, glabra, in siccо subtus pallidiora saepiusque viridi-lutescentia, 6—12 cm longa, 3—4(—5) cm lata, costa supra inferne parum impressa, subtus prominente, nervis lateralibus irregulariter 4—5-paribus subrectis, utrinque prominulis, rete venarum venularumque denso supra levissime elevato, subtus generaliter minus distincto; petioli c. 10 mm longi, 1—1.5 mm crassi. Spicae axillares solitariae, laxiflorae; rhachis gracilis, sparse appresse pilosula, (1—)2—5(—6) cm longa. Calycis lobi ovati, ciliati, 1.5 mm longi. Petala virescentia, sub plena anthesi in tubum 4 mm longum et 1—1.5 mm diam. connata, ceterum per 1 mm libera et erecto-patentia. Flores ♂: Filamenta 3 mm longa; antherae 1 mm longae. Ovarii rudimentum cylindricum, pilosum. Discus crassus pilosus. Flores ♀: Petala per $\frac{3}{4}$ partem inferiorem in tubum urceolato-cylindricum connata, c. 4 mm longa. Antherae rudimentariae. Ovarium ovoideum, dense breviter pilosum, stylo crasso vix 0.5 mm longo; stigma capitatum. Drupa obovoideo-oblongoidea, oblique obtuseque subtrigona, apice obtusa vel subapiculata, viridis vel brunnescens vel subnigrescens, 2.5—3.5(—4) cm longa, 1.8—2.5 cm diam., loculo abortivo distincto; exocarpium spongiosum et longitudinaliter fibrosum, 2(—3) mm crassum; endocarpium 0.5 mm crassum, longitudinaliter 8—10-costulatum, costulis exocarpium generaliter parum distincte obtuseque elevantes.

Notes. As the leaves of *G. macrophyllum* are not rarely similar to those of *G. calleryanum* (which also occurs in Borneo) incomplete specimens such as *Haviland & Hose* 3714, *Hose* 314 & 384, etc. cited above under *G. macrophyllum* might belong to *G. calleryanum*. The rudiment of the ovary in the ♂ flowers of *G. calleryanum* is sparsely hairy, that of *G. macrophyllum* apparently always quite glabrous, as is the ovary in the ♀ flowers, whilst the ovary in the ♀ flowers of *G. calleryanum* is densely short-hairy.

Blume in the original description of *Stemonurus macrophyllus* says 'In Archipelago indico'. The type specimen in Leyden bears also the remark 'Sumatra' and 'W.', from which can be guessed that the plant belonged originally to the collection of F.A.C.

Waitz and possibly was collected in Indrapura. The 'cylindric' fruit mentioned by Blume could not be traced at Leyden. The type specimen bears leaves and badly developed apparently ♀ flowers in a raceme c. 1.5 cm long; the leaves have a rather faint reticulation on the upper surface only, the quality and size of which agree with the leaves of most of the collections cited above from Sumatra and Borneo.

Imperfectly known species

Gonocaryum melanocarpum Hochr., Pl. Bog. Exs. (Dec. 1904) 42, n. 87; Bull. Inst. Bot. Btzg 22 (1905) 49; Ann. Jard. Bot. Btzg Suppl. III, 2 (1910) 855.

CULT. Hort. Bogor. sub III-G-105, fl. ♀ & fr. mat., Hochreutiner Pl. Bog. Exs. n. 87 (BO, type of *G. melanocarpum*; G, K, L, P, WRSL).

Note. Origin unknown, not yet collected in wild state. Most related to *G. litorale* in the flower characters and the absence of an abortive loculus in the fruit, but distinct by the black colour of the latter and by the leaves which much more resemble those of *G. calleryanum*.

SPECIMENS NOT NAMED DUE TO INCOMPLETENESS

Gonocaryum sp.

BORNEO. Sarawak: 4th Div., Bintulu, c. 4 km E. of Minah Camp, along Sg. Kakus, 20—60 m, fr. mat. (endocarp and seed only), Hotta 14070 (KYO; L, fragm.). — Possibly a new species with large leaves 34 by 14.5 cm, nerves impressed above, rachis in fruiting stage from defoliate axil 10—12 cm long.

Gonocaryum sp.

INDOCHINA. Annam: Thanh hoa, Hoi-xuan, fr., Poilane 1781 (K, L, P). — Drupe 5.5 by 2 cm, distinctly trigonous in cross-section, longitudinal ribs marked. Leaves reminding of those of *G. lobbianum*. Cited by Gagnepain, Fl. Gén. I.-C. Suppl. (1948) 755 as belonging to *G. subrostratum*.

Gonocaryum sp.

INDOCHINA. Annam: Mt Bani near Tourane, fl. ♂ immat., Clemens 3391 (K, P); ibid., fr. submat., Clemens 4039 (A, n.v.; K, P, U).

Leaves with fine reticulation impressed on both faces, yellowish green, shining. Infl. ♂ c. 5 cm long. Drupe hairy, yellowish green, ovoid, much flattened on two sides, ribs blunt, much prominent, c. 3 by 2.5 by 2 cm.

Gonocaryum sp. — *G. gracile* (non Miq.) Hundley & Chit, List Trees Burma ed. 3 (1961) 46.

BURMA. Tenasserim: Hefzer K.D. 817, defl. (K, P); Tavoy/Lasa Hill, fr. mat., Shaik Mokim 327 (K); Mergui, Yaungwa Ra., 450 m, fl. ♂ juv. & fl. ♀, Parker 2737, 2743 (K).

Leaves dull greyish green, with fine depressed reticulation on both faces. Spikes slender, up to 14 cm in the ♂, c. 6 cm in the ♀ specimens. Petals connate to a tube for their lower $\frac{1}{2}$ part, 6—7 mm. Ovary tomentose; style lateral, glabrous, 1 mm; stigma thick, almost capitate, c. 1 mm Ø. Drupe broadly ellipsoid, unilaterally much obliquely expanded, with strongly prominent obtuse ribs, c. 3 by 2.5 cm.

Gonocaryum sp.

MALAY PENINSULA. Trengganu: Dungun, Bukit Bauk F. R., FRI 3959.

Drupe ovoid-oblongoid, up to 5.5 by 3.5 by 2.5 cm, many-ribbed. Possibly conspecific with the specimens from Burma mentioned above.

Gonocaryum sp.

NEW BRITAIN. SW. of Subdidi village, Gasmata, 200 m, fr. red, immat., NGF 26566 (BRI, L, LAE); Massawa, ♂ defl., Schlechter 13727 (K).

Flowers and fruits fascicled, 3 or 4 per axil; fruit-pedicel thick, 5 mm. Drupe oblongoid, with narrow, longitudinal, abortive loculus and small, bilobed, sessile stigma, exocarp plus endocarp thin. Endosperm not (or not yet?) ruminant. The leaves resemble a little those of *G. calleryanum*.

EXCLUDED

Gonocaryum monostachyum K. Sch. & Laut., Fl. Schutzgeb. (1900) 415; Schellenb., Bot. Jahrb. 58 (1923) 166.

NEW GUINEA. Morobe Dist.: Sattelberg, Bamler, II-17 (B, type of *G. monostachyum*, †).

The type specimen was, according to Schellenberg, not present any longer with the New Guinea materials of the genus at Berlin investigated by him in 1923, and probably had been transferred to another

family; there is no trace of it among the *Iacinaeae* still preserved in Lauterbach's Herbarium at WRSL. To guess from the description, the species must be excluded from *Gonocaryum* by its very short, almost terete petioles (5–6 mm), very short petals (2 mm) which besides are hairy inside, characters which seem to be absent from the genus so far known.

Gonocaryum ? lobosporum (F. v. M.) Valet., Crit. Overz. Olacinae (1886) 249 ('*lobosperma*'). — *Phlebocalymna lobospora* F. v. M., Fragm. 9 (1875) 151 = *Sphenostemon lobosporus* (F. v. M.) L. S. Smith, Proc. R. Soc. Queensl. 68 (1957) 43, 49 (Aquiloliaceae).

Gonocaryum sinense Hand.-Mazz., Sinensis 3 (1933) 189. — *Osmanthus sinensis* (Hand.-Mazz.) Hand.-Mazz., Symb. Sin. 7, 4 (1936) 1006 = *Osmanthus marginatus* (Champ. ex Benth.) Hemsl., cf. Green, Not. R. Bot. Gard. Edinb. 22 (1958) 470.

9. HARTLEYA SLEUM., A NEW GENUS FROM NEW GUINEA

HARTLEYA

Sleum., gen. nov.

Arbor magna dioica. *Folia* spiralia, integra, coriacea, petiolata, pinnatinervia. *Inflorescentiae* axillares, e cymis 3—5 paucifloris pedunculatis modo paniculae brevis compositae. *Flores* unisexuales, ♀ tantum cogniti, subsessiles, apice pedunculorum secundariorum congesti; bracteae minutae caducae. *Calyx* cupulatus, usque fere ad medium (4-)5(-6)-lobus, lobis valvatis. *Petala* 4, oblonga, valvata, apice inflexa, intus laevia. *Staminodia* 4; filamenta carnosa, applanata, omnino glabra; antherae ellipticae, connectivo haud superatae, medifixa. *Ovarium* ovoideum, unilateraliter gibbosum, ovulis 2 anatropicis applanatis ex apice cavitatis pendulis; stigma sessile, subcapitatum, basi paullo constrictum itaque ab ovario bene discretum, papillosum, subbilobum, vel uno latere paullo depresso. *Discus* unilateralis liber, gibbositati ovarii oppositus, squamam crassam apice truncatam vel crenulatam ovarii basin semicircumdatam praebens. *Drupa* submatura convexa, a latere visa ovata et acuminata, exocarpio carnoso in sicco tenui tecta, latere convexo endocarpii crustacei costulis numerosioribus minute elevatis quasi nervis prominulis percursa, latere concavo endocarpii costa media longitudinali bene elevata instructa, per laterem concavum apice excepto appendice carnoso crasso obtecta, ima basi appendix disco squamiformi semiorbiculari instructa, calycis reliquiis fulta. Semen nondum bene evolutum.

Genus monotypicum a genere *Gastrolepis* van Tieghem stigmate subcapitato basi paullo constricto itaque ab ovario discreto, endocarpio latere concavo costa media longitudinali bene elevata appendiceque carnoso abscondita disci squama basi tantum ovario adnata, ceterum libera (in genere *Gastrolepis* modo bursae utroque latere cum ovario connata), ceterum floribus unisexualibus filamentisque (certe in fl. ♀) omnino glabris diversum, cl. Thomas G. Hartley exploratori florae Novae Guineae orientalis intelligentissimo dedicatum.

Hartleya inopinata Sleum., sp. nov.

Arbor 20—35 m alta, trunco 60—120 cm diam., cortice griseo-brunneo longitudinaliter fissso. *Ramuli* sat breves, irregulares, 3—8 mm crassi, apicibus teretes in sicco rugulosi, glabri, nigrescentes, deorsum subangulati citoque cortice tenui griseo obtecti. *Folia* elliptica vel oblongo-elliptica, apice breviter subabrupte acuminata, vel obtusa, basi in petiolum cuneata et subinaequilateralia, in sicco coriacea et fragilia, nigrescenti-brunnea, supra lucidula, in vivo supra saturate viridia, subtus lutescenti-viridia vel glaucescentia, ut videtur carnosa, glabra, integra, in sicco paullo revoluta, apicem versus desiccatione in laminis juvenilibus quasi serrulata, 5—8 cm longa, 2.5—4.5 cm lata, costa supra leviter immersa, subtus crasse prominente, nervis lateralibus 5—6 paribus parum vel vix curvatis utrinque parum manifestis, reticulo venarum nullo; petioli c. 1 cm longi, 2 mm crassi.

Inflorescentiae in axillis superioribus 2 vel 3 solitariae, 3—4-ramosae, paniculatae, pedunculo inclusa 3—4 cm longae, ramis subhorizontalibus c. 1 cm longis, inferne laxius, distaliter densius flavido-pubescentibus. *Flores* ♀ tantum cogniti, 2—3(—4) apicibus ramulorum cymose congesti, subsessiles. *Calyx* cupulatus, usque ad medium obtuse (4—)5(—6)-lobus, c. 1 mm altus. *Petala* 4 oblonga, luteo-viridia, glabra, c. 3 mm longa. *Staminodia* 4, ut videtur habitu staminum normalium, sed polline parentia; filamenta applanata glabra c. 3 mm longa; antherae ellipticae, c. 1 mm longae. *Ovarium* ovoideum, gibbosum, glabrum, 2 mm altum, stigmate depresso-capitato papilloso coronatum. *Discus* crasse squamatus, ovarium basi semicircumdat. *Drupa* submatura a latere visa elongato-ovata, acuminata, 1 cm longa, 4—5 mm lata, concava, exocarpio tenui in sicco nigrescente tecta, in sicco latere convexo costulis endocarpii numerosioribus longitudinalibus percursa, latere concavo costa mediana endocarpii crasse elevata instructa et apice excepto omnino appendice carnosamente applanato obtecta, basi disci squama semiorbiculata reliquaque calycis fulta.

NEW GUINEA. Morobe Dist.: summit of Mt Kaindi, c. 2400 m, fr. submat. 9-5-1963, Hartley 11836; Mt Shungol, c. 5 miles SW. of Wagau, 1830 m, fl. ♀ & fr. immat., 12-12-1963, Hartley 12501 (A, n.v.; L, type; LAE, n.v.).

Possibly belonging here:

NEW GUINEA. Vogelkop Peninsula: Kebar Valley, Mt Nettoti, c. 1700 m, sterile, BW 10405 Versteegh (L).

10. THE GENUS IODES BL. IN SOUTHEAST ASIA AND MALESIA

The preparation of the genus *Iodes* Bl. for 'Flora Malesiana' obliged the author to revise all species found in SE. Asia and Malesia. In the literature on *I. ovalis* so many mistakes have been made, that the confusion about this species in most of the local floras concerned has become a source of faulty plantgeographical deductions. Only by the different types of indument and their combination, observed with a lens, it is possible to separate clearly the diverse species. These indument types are constant enough when leaves of ± the same state of maturity are compared, and with their help the author could bring ♂ and ♀ material of the same species together, especially in a case where ♂ and ♀ of different species have been combined into the description of one species (*I. balansae* Gagnep.).

IODES

Bl., Bijdr. (1825) 29 ('*Iodes*'); R. Br. in Benn. & Br., Pl. Jav. Rar. (1852) 243, 245; Miq., Fl. Ind. Bat. 1 (1856) 795; Benth. in Benth. & Hook. f., Gen. Pl. 1 (1862) 355; Baill., Adansonia 10 (1872) 267 (sect. *Euiodes* Baill.); in DC., Prod. 17 (1873) 22; Hist. Pl. 5 (1874) 340; Mast. in Hook. f., Fl. Br. Ind. 1 (1875) 595; Boerl., Handl. 1, 1 (1890) 222; King, J. As. Soc. Beng. 64, ii (1895) 126; Gagnep., Fl. Gén. I.-C. 1 (1911) 844; Ridl., Fl. Mal. Pen. 1 (1922) 434; Sleum. in E. & P., Nat. Pfl. Fam. ed. 2, 20 b (1942) 377; Back. & Bakh. v. d. Br., Fl. Java 2 (1965) 61. — *Erythrostaphyle* Hance, J. Bot. 11 (1873) 266.

KEY TO THE SPECIES IN ASIA AND MALESIA

1. Petals in the ♂ flowers practically free, i.e. united only at the base.
2. Indumentum on the undersurface of ± mature leaves consisting almost exclusively of rather sparse to more dense and manifestly appressed stiff hairs.
 3. Flowers 5-merous. Pedicels of the ♂ flowers swollen and ± plate-like dilated distally, when the flower has gone. ♀ Flowers without staminodes. Veinlets of leaves rather faintly reticulated. Sumatra, Malay Peninsula, W. Java **1. I. ovalis**
 3. Flowers 4-merous. Pedicels of the ♂ flowers not swollen distally. Veinlets of leaves strongly reticulate.
 4. Appressed hairs on the undersurface of leaves rather dense. ♀ Flowers with 4 staminodes. Sumatra **2. I. yatesii** var. *yatesii*

4. Appressed hairs on the undersurface of leaves scattered. ♀ Flowers without staminodes. Borneo (Sarawak) 2. *I. yatesii* var. *glabrescens*
2. Indumentum on the undersurface of ± mature leaves consisting exclusively of either numerous fine and soft ± erect hairs, or both such hairs and more robust, stiff and generally appressed (rarely obliquely spreading) hairs of various density.
3. Indumentum on the undersurface of leaves practically consisting only of more soft and erect (or somewhat oblique) hairs.
6. Hairs on undersurface of leaves rather sparse. Flowers 4-merous. Petals present in ♀ flowers. Drupe 2.5—3 by 1.5 by 1 cm. Malay Peninsula 3. *I. reticulata*
6. Hairs on the undersurface of leaves (rather) dense. Flowers 5-merous. Petals absent in ♀ flowers. Drupe up to 2 by 1.2(—1.5) by 1 cm. Burma, Thailand, Indochina, Sumatra, Banka, Malacca Peninsula, Borneo, Celebes 4. *I. cirrhosa*
5. Indumentum on the undersurface of leaves consisting of ± appressed (or sometimes ± erect) more robust and finer soft ± erect hairs of various density.
7. Flowers (3)—4-merous. Filaments elongate (at least 2 mm). Ovary on a low cushion-like swelling which is still recognizable as a kind of contraction at the base of the fruit. Drupe with coarsely lacunose endocarp, within the depressions distinctly finely prominent-reticulated, c. 3 by 2 by 1—1.3 cm. (Upper surface of leaves rather coarsely prominent-reticulate). Indochina (Tonkin), Yunnan, Kweichow, Kwangsi 5. *I. seguini*
7. Flowers generally 5-merous. Filaments, if any, very short. Ovary without a basal swelling. Drupe (1.5)—2—2.2 by 1—1.3 by 0.8—1 cm.
8. Endocarp coarsely lacunose-reticulate. Soft ± erect hairs predominant on the undersurface of leaves. (Upper surface of leaves finely prominent-reticulate). Indochina, Hainan, Kwangsi, Kweichow, Hongkong 6. *I. vitiginea* var. *vitiginea*
8. Endocarp rather smooth. Scabrid ± appressed hairs predominant on the undersurface of leaves. Kweichow 6. *I. vitiginea* var. *levitestis*
1. Petals in the ♂ flowers united into a tube for about their lower $\frac{2}{3}$ (the tube at least 3 mm long).
9. Drupe oblong-ellipsoid, ± obtuse at both ends, 1.2—1.5 by 0.8—1.2 by 0.8—1 cm. Borneo, Philippines, Celebes, Moluccas 7. *I. philippinensis*
9. Drupe oblong-ovoid, apex broadly obtuse, base narrowed, 2.8—3.3 by 1.3—1.5 by 0.8—1.2 cm.
10. Indumentum on the undersurface of ± mature leaves consisting of ± appressed stiff and erect softer hairs on nerves, veins, and veinlets, the proper intervenium between the veinlets being hairless and green. Malay Peninsula 8. *I. velutina* var. *velutina*
10. Indumentum on the undersurface of ± mature leaves consisting of ± appressed stiff and erect softer hairs on nerves, veins, and veinlets, and besides of a tomentum of short soft hairs, which covers the whole intervenium which is of a greyish color. Sumatra, Borneo, ? New Guinea. 8. *I. velutina* var. *subvilllosa*

I. Iodes ovalis Bl., Bijdr. (1825) 30; R. Br. in Benn. & Br., Pl. Jav. Rar. (1852) 243, t. 48; Miq., Fl. Ind. var. *levitestis* Hand.-Mazz., Sitzungsanz. Akad. Wiss. Math.-Naturw. Kl. Wien 58 (1921) 150; Symb. Sin. 7 (1933) 668. — *Sabia edulis* Lévl., Fl. Kouy-Tchéou (1915) 379, *nom. nud.*, p.p.

CHINA. Kweichow: Tschennung to Huang tsauba, 1100 m, fr., von Handel-Mazzetti 10374 (A, C; WU, type of *I. vitiginea* var. *levitestis*, n.v.); ibid., 580 m, fl. ♂, von Handel-Mazzetti 10349 (WU, n.v.); Tchen-fong a Hin-y-fou, fr., Cavalerie 3932 (A, fragm. ex E; E, as *Sabia edulis*).

Note. Possibly a separate species. *Cavalerie* 3932 was cited under *I. seguini*, but without doubt represents *I. vitiginea* var. *levitestis*, the latter wrongly cited by Rehder as a synonym of *I. seguini*. Fruits resemble those of *Mappianthus*.

7. Iodes philippinensis Merr., Philip. J. Sc. 3 (1908) Bot. 241; C. B. Rob., *ditto* 6 (1911) Bot. 209; Merr., J. Str. Br. R. As. Soc. 86 (1922) 326; Holth. & Lam, Blumea 5 (1942) 205; Masam., En. CELEBES. Central Eastern Celebes: Lelewau, Latón, 100 m, Kjellberg 2556.

MOLUCCAS. Talaud Is: Kaburuang, 130 m, Lam 3211; Karakelong, Mt Duata, 50 m, Lam 2807. — Morotai: Totodoku, 30 m, Kostermans 709, 1457. — Halmahera: Teysmann & de Vries a. 1860 (L); Goal, 100 m, Pleyte 158; cult. Hort. Bogor, Hochreutiner Pl. Bog. Exs. 26 (BO, G, type of *I. oblonga* var. *moluccana*, K, L, P). — Ternate: 25 m, Beguin 980. — Ambon: Teysmann H.B. 1985.

8. Iodes velutina King, J. As. Soc. Beng. 64, ii (1895) 127; Ridl., Fl. Mal. Pen. 1 (1922) 434; Burk., Dict. (1935) 1245.

var. *velutina*

MALAY PENINSULA. Perak: Scortechnini (BM; CAL, syntype of *I. velutina*, *n.v.*; G, K, L, P, SING), fl. ♂, Batu Togoh, 60 m, Wray 2141 (CAL, lectotype of *I. velutina*, *n.v.*; K, SING), fr. — Negeri Sembilan: Bukit Danan, Cantley (*Alvins*) 58 (SING), fr. — Malacca: Maingay K.D. 380 & 1039 (K, syntypes of *I. velutina*), Ridley 208; Merlimau, Caniley (*Alvins*) a. 1885 (SING). — Singapore: Bukit Timah road, Ridley 2718 (BM, SING).

var. *subvillosa* Sleum., var. nov.

Folia subtus ad interstitia venularum tomento denso brevi pilorum substellatorum obtecta itaque cinerascentia (in var. *velutina* glabra et viridia). Floribus fructibusque a var. *velutina* nullo modo diversa.

SUMATRA. Eastcoast: Asahan, Kuala Masili, Yates 2224. — Benkulen: Rimbo Pendagang, 1000 m, Ajoeb (*Exp. Jacobson*) 164.

BORNEO. W. Borneo: Amai Ambit, *Hallier* 3354. — Sarawak: 1st Div., W. & E. passage of Sg. Serin 30 miles S. of Kuching, 100—300 m, fr., *Jacobs* 5153 (L, typus); N. slopes of Mt Penrisen, 900—1000 m, fl. ♂, *Jacobs* 5105 (B, G, K, L, S, SAR, US).

'NEW GUINEA', *Zippelius* (L). If this plant really was collected in New Guinea by Zippelius, then it must have been on the South coast, from where up to now no species of *Iodes* has been collected. Mentioned by Schellenberg as *I. tomentella* in Bot. Jahrb. 58 (1923) 176.

EXCLUDED

Iodes ferruginea K. Sch. & Laut., Fl. Schutzgeb. (1900) 418; Schellenb., Bot. Jahrb. 58 (1923) 176, note sub *I. tomentella* = *Alangium villosum* (Bl.) Wang.

NEW GUINEA. Madang Dist.: 'Schumann-Fluss' (= Nuru R.?), 250 m, *Lauterbach* 2387 (= 387, B, type of *I. ferruginea*, †; G-Boiss, K; WRSL, Herb. Lauterbach, part of type of *I. ferruginea*).

II. THE GENUS MAPPIANTHUS HAND.-MAZZ.

MAPPIANTHUS

Hand.-Mazz., Sitzungsanz. Akad. Wiss. Math.-Naturw. Kl. Wien 58 (1921) 150; Symb. Sin. 7 (1933) 667, t. 10, f. 3; Sleum. in E. & P., Nat. Pfl. Fam. ed. 2, 20 b (1942) 379. — *Iodes* Bl. sect. *Lasiodes* Baill., Adansonia 10 (1872) 268 (lectotype: *I. hookerianus* Baill.); in DC., Prod. 17 (1873) 24; Mast. in Hook. f., Fl. Br. Ind. 1 (1875) 596; Sleum. in E. & P., Nat. Pfl. Fam. ed. 2, 20 b (1942) 379.

KEY TO THE SPECIES

1. Leaves with 4—5 pairs of lateral nerves, these sparsely set with subtrigose appressed hairs underneath.
Indochina (Tonkin), China (Fukien and Hunan to Kwangtung and Hainan), Hongkong.
 1. ***M. iodoides***
 2. Leaves with 7—8(—9) pairs of lateral nerves, these ± densely covered with subtrigose appressed hairs underneath. Assam, East Bengal, Sumatra, Borneo ***M. hookerianus***
1. ***Mappianthus iodoides* Hand.-Mazz.**, Sitzungsanz. Akad. Wiss. Math.-Naturw. Kl. Wien 58 (1921) 150; Symb. Sin. 7 (1933) 667, t. 10, f. 3 (phot.); Merr., Lingn. Sc. J. 13 (1934) 61; Chun, Sunyatseria 2 (1934) 72; Sleum., Notizbl. Berl.-Dahl. 15 (1940) 252; Dahl, J. Arn. Arb. 33 (1952) 274, f. 69, 69 A (Pollen); Wu & Wang, Act. Phytotax. Sin. 6 (1957) 283; Chun & Chang, Fl. Hainan. 2 (1965) 451, f. 514.

INDOCHINA. N. Tonkin: Cha-pa, 1500 m, *Pételet* 8750 (A, n.v.; P).

CHINA. Fukien: Futschau, Kushan Hsien, Dec. 1887, *Warburg* 6016 (B, †). — Hunan: Tsingtchou, near Moschi-se, 400 m, von Handel-Mazzetti 11093 (A; WU, type of *M. iodoides*, n.v.). — Kwangtung: Lin Fa Shan, W.T. *Tsang* 25598. — Kweichow: Ping-chow, Y. *Tsiang* 7142, 9367. — Kwangsi: S.K. *Lau* 28718, C. *Wang* 39946; In-tung, Miu Shan, N. Luchen (border with Kweichow), 915 m, R.C. *Ching* 6195; Chen Pien Dist., S.P. Ko 55946; Ling Wang Shan, San Chiang Hsien, 2100 m, *Steward* & *Cheo* 1093. — Hainan: *H. Fung* 20090 (cit. Merrill), *Tsang* & *Fung* 18147 (cit. Merrill); Five Finger Mts, *McClure* 8569; Po-ting, 455—855 m, F.C. *How* 72874, 73652; Fan Yah, 915 m, *Chun* & *Tso* 44158; Ngo Ko Shan, S.K. *Lau* 1895. — Yunnan: Pinh-pien Hsien, 1400 m, H.T. *Tsai* 61743; Hei-lung-tarn, Fo-hai Hsien, 1800 m, C.W. *Wang* 76273; Meng-soong, Dahmeng-lung, Cheli Hsien, 1900 m, C.W. *Wang* 78320 (A, K; P, as *Iodes crassinervia* Hu ms.); Szemao, 1370 m, *Henry* 12063.

HONGKONG. North side of Victoria Pic, halfway in a ravine, fl. ♀, *Bodinier* 723 (E).

2. ***Mappianthus hookerianus* (Baill.) Sleum., comb. nov.** — *Iodes hookeriana* Baill., Adansonia 10 (1872) 268; in DC., Prod. 17 (1873) 24; Mast. in Hook. f., Fl. Br. Ind. 1 (1875) 596; Kurz, J. As. Soc. Beng. 44, ii (1875) 157; For. Fl. Br. Burma 1 (1877) 244; Brandis, Ind. Tr. (1906) 154; Kanjilal c.s., Fl. Assam 1, 2 (1936) 254. — *Iodes thomsoniana*

Baill., *Adansonia* 10 (1872) 270; in DC., *Prod.* 17 (1873) 25; Mast, in *Hook. f., Fl. Br. Ind.* 1 (1875) 596; Brandis, *Ind. Tr.* (1906) 154. — *M. borneensis* Merr., *Webbia* 7 (1950) 317.

ASSAM. Rufoo, *Griffith K.D.* 827 (K, P); Khasi and Jaintia hills, *Ruse* 420 (A, n.v.). After Kanjilal c.s. in Sibsagar, Darrang, and Khasi hills, no material seen by me.

EAST BENGAL. Terrya Ghat, *Hooker f.* & *Thomson* 2123 (K, type of *Iodes hookeriana*; P-Baillon, part of type ex K); Chittagong, *Hooker f.* & *Thomson s.n.* (K); ibid., Seetakoend, *Hooker f.* & *Thomson s.n.* (K, type of *Iodes thomsoniana*; P, part of type ex K); Churra, Nunklow, Terrya Ghat, *Hooker f.* & *Thomson* (K, maybe part of type material of *Iodes hookeriana*).

SUMATRA. Locality unknown (probably from Westcoast), fl. ♂, *Korthals* 652 (L).

BORNEO. N. Borneo, Mt Kinabalu, Kiau, fr. 25-11-1915, *Clemens* 9978 (A, type of *M. borneensis*); ibid., Dallas, 915 m, fr. 15-9-1931, *Clemens* 26403 (A, BM, BO, G, K, L).

12. THE GENUS MEDUSANTHERA SEEM. IN MALESIA

MEDUSANTHERA

Seem., *J. Bot.* 2 (1864) 74; Howard, *J. Arn. Arb.* 21 (1940) 469; Sleum. in E. & P., *Nat. Pfl. Fam.* ed. 2, 20 b (1942) 362; Howard, *Lloydia* 6 (1943) 133. — *Tylecarpus* Engl. in E. & P., *Nat. Pfl. Fam.* III, 5 (1893) 247; K. Sch. & Laut., *Fl. Schutzgeb.* (1900) 413 ('*Tylecarpus*'); Lloyd & Aiken, *Bull. Lloyd Lib.* n. 33, *Bot. ser.* 4 (1934) 65, fig.; Sleum., *Notizbl. Berl.-Dahl.* 15 (1940) 246; in E. & P., *Nat. Pfl. Fam.* ed. 2, 20 b (1942) 362, fl. 103 A & B.

KEY TO THE SPECIES

1. Drupe 3—3.5 cm long, oblong, tapering to the blunt apex, with a single (median) longitudinal ridge on the convex surface.
 2. Leaves ± coriaceous.
 3. Leaves ovate, 5—7 by 3—4.5 cm. Samoa *M. ovata* Howard
 3. Leaves 6—10 by 3—5 cm, ovate to ovate-oblong. Fiji *M. vitiensis* Seem.
 2. Leaves thinner, elliptic to ovate-elliptic, 10—17 by 5—7 cm. Samoa.

M. samoensis (Reinecke) Howard
1. Drupe 1—2 cm long.
 4. Drupe subovate-oblong, base obtuse-truncate, apex gradually attenuate and subacute, with a single marked (median) longitudinal ridge on the convex side, other parallel ones rather indistinct. Leaves with (4—)5—6 (rarely 8) pairs of nerves. Petals 2(—2.5) mm. S. Thailand, Sumatra, Malay Peninsula. *M. gracilis*
 4. Drupe oblong-elliptic, blunt on both ends, with 3 (or 5) marked longitudinal ridges on the convex side. Leaves with (6—)8—10(—12) pairs of nerves. Petals 3—4 mm. Philippines and Celebes to Caroline Is., Moluccas, New Guinea, Aru & Kai Is., Bismarck Archipelago, and Solomon Is.

M. laxiflora

I. Medusanthera gracilis (King) Sleum., comb. nov. — *Gomphandra gracilis* King, *J. As. Soc. Beng.* 64, ii (1895) 115; Ridl., *Fl. Mal. Pen.* 1 (1922) 429, incl. var. *gracillima* Ridl., l.c. 430. — *Gomphandra lanceolata* (Mast.) King var. *angustifolia* King ap. Ridl., *Fl. Mal. Pen.* 1 (1922) 429, p.p. — *Gomphandra Yatesii* Merr., *Pap. Mich. Ac. Sc.* 19 (1934) 165, t. 28. — *Stemonurus Yatesii* (Merr.) Howard, *J. Arn. Arb.* 21 (1940) 469; Dahl, *ditto* 33 (1952) 268 (Pollen).

THAILAND. Puket: Kao Pawta Luang Kéo, 900 m, *Kerr* 16920.

SUMATRA. Eastcoast: Asahan, Bandar Puluh and Masili, *Yates* 2248, 2637 (BO, L; MICH ?, type of *Gomphandra Yatesii*, n.v.; UC, n.v.); Huta Bagasan, *Rahmat Si Boeea* 6647; Habinsaran, between Parsoburan and Nassau, 900 m, *Loerzing* 7998. — Tapanuli: Toba, Tutupan, *Rahmat Si Boeea* 6020, 6031.

Fam. ed. 2, 20 b (1942) 388; Taxon 17 (1968) 449, nom. cons. prop., non Bl., Bull. Sci. Phys. & Nat. Néerl. 1 (June 1838) 94; Ann. Sci. Nat. Bot. II, 10 (Oct. 1838) 256 (= *Stauranthera* Benth. 1835), non Arn. & Nees 1843 (= *Garnotia* Brongn.). — *Jenkinsia* Griff., Calc. J. Nat. Hist. 4 (1843) 231; *ditto* (1844) t. 12, non Hook., Gen. Fil. (1842) text opp. pl. 75 b, non Wall. ex Voigt, Hort. Suburb. Calc. (1845) 544, nom. in syn. (= *Myriopteron* Griff.).

Type species: *M. kleinii* Meisn. (= *Jenkinsia assamica* Griff.).

KEY TO THE SPECIES

1. Calyx and lobes of the petals distinctly spaced both in the ♀ and ♂ flowers by the elongate flower axis (= the basal connate tube-like part of the petals). Drupe 'pseudopedicelled' by this axis (and besides much narrowed towards the base into a kind of stalk which equally might be present in the other group of species under 1).
 2. Leaves oblong to subovate-oblong, (10—)12—17 by 4—6.5 cm; inner basal pair of nerves ascending to the lower third of the lamina. Umbels c. 10-flowered. Philippines (Camiguin & Bohol I.)
I. M. reticulata

2. Leaves ovate, 7—11 by 5—9 cm; inner basal pair of nerves ascending to half or $\frac{2}{3}$ of the length of the lamina. Umbels c. 5-flowered. Philippines (N. Luzon) 2. *M. philippinensis*
1. Calyx and lobes of the petals close to each other in the ♀ flowers resp. below the drupe, and whether or not spaced in the ♂ flowers.
3. Calyx and lobes of the petals apparently close to each other in the ♂ flowers. Leaves sinuate-dented.
4. Leaves oblong-lanceolate, 8—14 by 4—6 cm. Laos M. *paniculata* Gagnep.
4. Leaves broadly ovate-lanceolate, (15—)20—22 by 9—10 cm. India (Western Ghats: Anamalais).
M. *dentata* Bedd.
3. Calyx and lobes of the petals distinctly (already in developed bud stage) spaced in the ♂ flowers. Leaves entire or practically so (sometimes coarsely few-lobed or undulate).
5. Anthers markedly sagittate. (Drupe not known). Laos M. *umbellata* Gagnep.
5. Anthers elongate-oblong, hardly or not sagittate.
6. Base of drupe very shortly or hardly narrowed, rounded in general. Assam, Burma ?, Thailand.
3. *M. kleinii*
6. Base of drupe suddenly narrowed into a slender pedicel-like stalk for at least 3 mm.
7. Drupe 2.3—3.3 by 1.3—1.8 by 0.7—1 cm, narrowed at apex into a shorter or longer rather slender beak; endocarp coarsely lacunose. Malay Peninsula (Kemaman, Kedah, Perak, Pahang, Selangor), Borneo 4. *M. caudata*
7. Drupe (0.8—)1—1.2(—1.7) by 0.7—0.8(—1.2) by 0.6 cm, shortly and rather gradually narrowed at apex; endocarp more finely lacunose. W. Sumatra, Borneo, Celebes, Philippines (Luzon to Mindanao) 5. *M. celebica*

Note. Only ♀ flowers known and not placed: *M. thorelii* Gagnep. (Laos).

1. *Miquelia reticulata* Merr., Philip. J. Sc. 9 (1914) Bot. 312; En. Philip. 2 (1923) 493.

PHILIPPINES. Camiguin I.: Panatayuan, B.S. 14674, fl. ♀, fr. (BM, K, P; PNH, type, †). — Bohol: B.S. 43303, fl. ♀, fr. (L, SING, UC).

2. *Miquelia philippinensis* Merr., Philip. J. Sc. 14 (1919) 416; En. Philip. 2 (1923) 493.

PHILIPPINES. Luzon: Ilocos Norte, Burgos, B.S. 32885 (K, P; PNH, type, †).

3. *Miquelia kleinii* Meisn., Pl. Vasc. Gen. 2 (1838) 109; Bl., Rumphia 4 (1849) 37; Mus. Bot. Lugd. Bat. 1 (1849) 42; Walp., Ann. 2 (1851) 22; Miq., Fl. Ind. KEY TO THE SPECIES

1. Leaves \pm unequal at base; petiole (2—)3—5(—6) cm. Petals 4—5(—6) mm, densely to sparsely villose within. S. India, Ceylon, Assam, Burma, Thailand, Cambodge, Lan Yu I. (SE. of Formosa, Botel Tobago, Kôtyôsyo), Ryu-Kyu Is. (Yaeyama group), W. Sumatra, Philippines (N. Luzon).
 1. *N. foetida* s. l.
1. Leaves \pm equal at base; petiole 1—2 (rarely —2.5) cm.
 2. Leaves rounded-obtuse at apex. Petals c. 7 mm, weakly hirsute within. Hainan . 2. *N. obtusifolia*
 2. Leaves acuminate-attenuate at apex.
 3. Leaves finely prominent-reticulate on both faces. Petals 4—5 mm, sparsely hairy below or practically glabrous within. Thailand, NE. Sumatra, W. Java, W. Sumbawa 3. *N. montana*
 3. Leaves smooth (not distinctly reticulate) on both faces. Petals 6—7 mm, all over villose within. China (Szechuan, Yunnan, Kwangtung, Kweichow, Hunan, Hupeh), Indochina (Tonkin).
 4. *N. pittosporoides*
1. *Nothapodytes foetida* (Wight) Sleum., Notizbl. Berl.-Dahl. 15 (1940) 247; Howard, J. Arn. Madras 1 (1915) 197. — *Mappia tomentosa* Miers, Ann. Mag. Nat. Hist. II, 9 (1852) 397, repr. Contr. Bot. 1 (1852) 67; Schnizl., Ic. 4 (1866) t. 233 a (Fr.); Mast. in Hook. f., Fl. Br. Ind. 1 (1875) 589; Gamble, Fl. Pres. Madras 1 (1915) 196; Hundley & Chit, List Trees Burma ed. 3 (1961) 46. — *Mappia* sp., Thwait., Kew J. Bot. Lond. 7 (1855) 212. — *Mappia tomentella* Miers ex Valet., Crit. Overz. Olacin. (1886) 183. — *Mappia cambodiana* Pierre, Fl. For. Cochinch. (1892) t. 267; Gagnep., Fl. Gén. I.—C. 1 (1911) 824. — *Mappia ovata* Miers var. *insularis* Matsum., Bot. Mag. Tokyo 15 (1901) 55; Matsum. & Hayata, En. Pl. Formos. (1906) 80; Masam., Short Fl. Formosa (1936) 128; Liu, Sasaki & Keng, Quart. J. Taiwan Mus. 8 (1955) 305. — *Mappia dimorpha* Craib, Kew Bull. (1926) 347; Fl. Siam. En. 1 (1926) 274. — *Neoleretia foetida* (Wight) Baehni, Candollea 7 (1936) 177, pl. 4, f. 2, D—F. — *Neoleretia dimorpha* (Craib) Baehni, Candollea 7 (1936) 178. — *N. dimorpha* (Craib) Sleum., Notizbl. Berl.-Dahl. 15 (1940) 247; Howard, J. Arn. Arb. 23 (1942) 68, pl. 3, f. 1—7; Wu & Wang, Act. Phytotax. Sin. 6 (1957) 281.

The above given synonymy refers to *N. foetida* sensu lato. I have investigated all material available to me from India, Thailand, Indochina, China, and Malesia, and did not find a single character constant enough to divide this species into infraspecific units. The materials from N. Luzon agree in their glabrescence with several so-called species described by Miers from Ceylon, whilst the collection from W. Sumatra matches Wight's type specimen almost completely.

THAILAND. Payap: Doi Inthanond, 1800 m, Smitinand 10284; Mè Li, Lampun, Winit 136, 350. — Maharat: Lampang, Mè Pêng, 130 m, Winit 1709; Prae, Sup Sai, Vanpruk 258, 267 a. — Pitsanulok: Sukotai, Kerr 5952 (K, type of *Mappia dimorpha*).

SUMATRA. Westcoast: Mt Sago near Pajakumbuh, 1000 m, fr. 11-6-1957, Maradjo 423 (L).

PHILIPPINES. Luzon: Ilocos Norte Prov., Mt Quebrada, 110 m, PNH 17792, 17804; Mt Pico de Loro, 300 m, PNH 18004; Isabela, Ganui, Vidal 3342 (K).

2. Nothapodytes obtusifolia (Merr.) Howard, J. Arn. Arb. 23 (1942) 70; Chun & Chang, Fl. Hainan. 2 (1965) 447, f. 509. — *Mappia obtusifolia* Merr., Lingn. Sc. J. 14 (1935) 28, f. 9.

Lectotype species: *P. gigantea* Wall. = *P. macrophylla* (Bl.) Bl., cf. Sleum., Taxon 17 (1968) 448.

KEY TO THE SPECIES

1. ♂ Flower heads solitary, each on top of an axillary or slightly supra-axillary peduncle (as is always the case with the ♀ ones) on younger foliate parts of the branchlets. Borneo **I. *P. anomala***
1. ♂ Flower heads several together, united to an inflorescence, the latter either from foliate or defoliate axils, or from tubercles on the stem.
 2. ♂ Flower heads rather few, united to a true raceme, i.e. the peduncled heads spaced along a rachis. Borneo **2. *P. racemosa***
 2. ♂ Flower heads numerous, united to a spike-like panicle.
 3. ♂ Flower heads in fascicles or glomerules, these markedly spaced at least in the lower half of the rachis.
 4. Leaves broadly oblong, base slightly cordate, flat in dry specimens. New Guinea. **3. *P. interrupta***
 4. Leaves ovate, base rounded, ± bullate by impressed nerves and veins in dry specimens. New Guinea **4. *P. malacothrix***
 3. ♂ Flower heads in short-peduncled cymes, secondary racemes, or panicles, these generally crowded (rarely spaced) along the rachis.
 5. Bracts in the ♂ inflorescences very distinct, persistent, markedly plumed by ± spreading hairs.
 6. Basal part of bracts hardly or not widened. Malay Peninsula (Perak, Pahang, Selangor). **5. *P. trichura***
 6. Basal part of bracts widened up to 6 mm. Borneo **6. *P. borneensis***
 5. Bracts in the ♂ inflorescences wanting (already gone in full anthesis) or, if persistent, filiform to narrow-subulate and not markedly plumed.
 7. ♂ Inflorescences rather short, 2.5—5 by (0.5—)1—1.5 cm. Leaves normally oblong or oblong-lanceolate, early glabrescent. Lower Burma, S. Thailand, Indochina (Cochinchina, Annam), Malay Peninsula **7. *P. oblonga***
 7. ♂ Inflorescences elongate to caudate, i.e. markedly longer and at least 2 cm Ø. Leaves oblong to ovate-cordate, or palmate, generally tardily or hardly glabrescent.
 8. Leaves normally palmate, i.e. deeply and narrowly (3—)5(—7)-lobed in flowering specimens. S. Thailand, Malay Peninsula, SE. Sumatra, Riouw Arch. (P. Bintan). **8. *P. palmata***
 8. Leaves normally entire or ± broadly 3-lobed in flowering specimens (sometimes palmate in sterile juvenile specimens).
 9. ♂ Inflorescences slender, c. 2 cm Ø. Bracts ± persistent, numerous, much exerted beyond the partial inflorescences. Drupe 4.5—8 by 1.5—2.3 cm incl. the hollow beak of the exocarp. S. Thailand, Malay Peninsula, Sumatra, Lingga Arch., Borneo. **9. *P. bracteata***
 9. ♂ Inflorescences thickish, (2.5—)3 cm or more Ø. Bracts, if persistent, rather few and less exerted.
 10. Mature drupe 3—4(—4.5) by 1.5—2 cm incl. the hollow short beak of the exocarp; hard endocarp (2—)2.5—3(—3.5) cm long. Celebes. **10. *P. hirsuta***
 10. Mature drupe (5.5—)6—10(—13) cm long incl. the hollow elongate beak of the exocarp.
 11. Drupe (7—)7.5—10(—13) by 3—3.5 cm; endocarp (4—)5—6 by 2—2.5 cm. Burma, Sumatra, Java, Philippines. **11. *P. macrophylla* var. *macrophylla***
 11. Drupe (5.5—)6—6.5(—7) by 1.5—2 cm.
 12. Endocarp 4—4.5 by c. 1.5 cm. Borneo (Mt Kinabalu). **12. *P. macrophylla* var. *caudigera***
 12. Endocarp c. 2.5 by 1 cm. Celebes. **12. *P. macrophylla* var. *dasyarpa***

Binuang, fr. immat., SAN 30690 (K, L, SAR). — E. Borneo: Berau, Tdg. Redeb, Kelai R. near Long Lanuk, 30 m, Kostermans 21068.

2. *Phytocrene racemosa* Sleum., sp. nov.

Scandens, usque ad 40 m alta, caule c. 1.5 cm diam., cortice brunneo longitudinaliter striato et fisco, lenticellis linearibus transversis paucis obsito, partibus junioribus foliigeris breviter pallide ferrugineo-tomentosulis. *Folia* oblonga usque oblongo-obovata, apice abrupte per c. 1.5 cm longe acuminata vel subcuspidata, acutiuscula, basi late cuneata leviterque cordata, fere subpeltata, chartacea usque subcoriacea, supra maturitate nervorum basali parte piloso excepto glabra, subtus ad costam, nervos, venas et venulas pilis brevibus subappressis vel patentibus pallide ferrugineis densius vel laxius obsita tactaque mollia, leviter sinuato-denticulata vel integra, 18—32 cm longa, 7—20 cm lata, costa nervisque supra planis, subtus cum reticulo venarum venularumque bene prominentibus, nervis basalibus utroque latere costae 2-paribus, pare exteriore brevi, interiore alte (usque ad medianam laminae partem) suberecto-ascendente, paribus a costa altius abeuntibus iis paris interioris subparallelis 3 vel 4; petioli sicut ramuli tomento fere scabrido fulvo-tomentoso induiti, 1.5—3 cm longi, 2—4 mm crassi. *Racemi*, e tuberculis ligni veteris vel c. 1 cm supra axillas ramulorum crassiorum (c. 7 mm diam.) saepius jam defoliatas enascentes, laxe distanterque capitula 5—10 c. 1 cm longe et 1 mm crasse pedunculata basi peduncolorum bractea brevissima, ut videtur, cito caduco fulta gerentes, omnibus partibus fulvo-tomentosi, 6—12 cm longi; capitula multiflora, c. 5 mm diam. *Calycis segmenta* 5 fere libera, lineari-spathulata, longepilosa, 2 mm longa. *Petala* 4 lineari-oblancoelata, inferne tantum connata, dorso longepilosa, intus glabra, 2.5 mm longa. *Stamina* 4; filamenta filiformia, glabra, basi in columnam brevem apice ovarii rudimentum hirsutum gerentem connata, parte libera c. 1 mm longa; antherae late ellipticae, 0.4 mm longae. *Racemi* ♀ (Ridley a. 1915) c. 1 cm supra axillas defoliatas orti, capitula c. 5 laxe disposita gerentes, ad rhachem c. 4 cm longam et pedunculos fulvo-hirsutis; capitula multiflora, globosa, c. 5 mm diam., pedunculis crassis 1.5—2 cm longis. *Calycis segmenta* et *petala* ut in fl. ♂. *Ovarium* cylindricum, hirsutum, c. 2 mm longum. *Drupa* valde immatura (Ridley a. 1915) subovoideo-cylindrica, c. 1 cm longa, emergentiis aculeiformibus vel bulbosis obsita, emergentiis ipsis in parte superiori drupae brevioribus breviusque hirsutis, in parte inferiore drupae longioribus, angustioribus et longius hirsutis, stylo crasso e stigmatibus inferne connatis formato c. 1 mm longo. *Fructificatio* matura (S 17155) globosa, c. 8 cm diam., e drupis c. 30 formata; drupae subelliptico-oblongoideae, basi apiceque attenuatae, superne emergentiis exocarpii aculeiformibus 1—3 mm longis retrorsis breviterque hirsutis, inferne emergentiis angustioribus 6—8 mm longis densissime hirsutis et prorsus versis indutae, 4—5 cm longae, 2—3 cm crassae; endocarpium oblongoideo-ellipticum, apice basique obtusum, lateraliter valde compressum, lignosum, laeve, extus foveis elongatis numerosis sat profundis lineatum, intus loco fovearum verrucosum, c. 3 cm longum, 1.5 cm latum, 1.3 cm crassum.

BORNEO. Sarawak: 1st Div., Kuching, Mt Mattang, fl. ♀ & fr. immat., Ridley a. 1915 (K); 3rd Div., Kapit, Ulu Sg. Bena, 215 m, fr. mat., S 17155 (SAR); 4th Div., Batang Tinjar, Ulu Atun, Setap shale ridge, 200 m, in mixed Dipterocarp forest, fl. ♂ 25-3-1965, S 22325 Murthy & Ashton (K; L, type; SAR, SING); Bintulu, Bukit Kemantan, Sg. Muput, fr., S 19513 (K).

3. *Phytocrene interrupta* Sleum., Notizbl. Berl.-Dahl. 15 (1940) 252.

NEW GUINEA. Central Dist.: Koitaki, 450 m, fl. ♂, Carr 12612 (A, n.v.; B, type, †; L, SING).

4. Phytocrene malacothrix Sleum., Notizbl. Berl.-Dahl. 15 (1941) 361.

NEW GUINEA. Morobe Dist.: Boana, Sattelberg area, 1030 m, ♂ fl. bud, Clemens 8620 (B, type, †).

Note. Imperfectly known species, said to be related to *Phytocrene interrupta* Sleum. in the original diagnosis. The 'tomentose tendrils' mentioned there are possibly nothing but curved ends of branchlets and not real tendrils which are unknown in *Phytocrene*. Two other characters given in the original description, viz. 'petiole thickened distally' and 'midrib prominent above' are also further practically absent from the genus. There is a possibility that the species really belongs to an other family (*Cucurbitaceae?*, *Menispermaceae?*, *Rhamnaceae*), but in absence of type material this also remains doubtful.

5. Phytocrene trichura Ridl., Fl. Mal. Pen. 1 (1922) 433.

MALAY PENINSULA. Perak: just inside Batang Padang Valley from Telom, fl. ♂, Ridley a. 1908 (K, fragm. ex SING; SING, type). — Pahang: Cameron Highl., Lubok Tamang, 1065 m, Henderson 10928 (SING). — Selangor: Mt Bunga Bua, FRI 351 (KEP).

CELEBES. *De Vriese* & *Teysmann* (fr.: L). — Minahasa: in montis Lukkon, *Reinwardt*, Oct. 1821 (L); Menado, *Teysmann H.B.* 5271 (BO, L; U, lectotype of *P. dasycarpa*, fl. ♂), 5721 (BO, fl. ♀), 5791 (BO & L; fl. ♂; U, syntype of *P. dasycarpa*, leaves only); Kajuwatu, 50 m, *Koorders* 17996 (BO, type of *P. tinosporifolia*; L), 18359 & 18360 (BO, L); Road from Singkel to Buha, 20 m, *Koorders* 17992 (BO, type of *P. ovalifolia*; K, L); Mt Batu, Angus Res., *Alston* 16054. — Central eastern part: Malili, 350 m, *Kjellberg* 2279 (BO, S); Kawata, 150 m, *Kjellberg* 2341 (BO, S); Lelewao, 100 m, *Kjellberg* 2570 (S). — Southeastern part: Kandari, Lepo-lepo, *Beccari*, July 1874 (FI, leaves only). — Cult. Hort. Bog., intr. from Celebes: *Hochreutiner* 92.

Note. The fruits figured in Miquel, *Ann. Mus. Bot. Lugd. Bat.* 3 (1867) t. 7, and preserved at U, belong to var. *macrophylla*; they apparently were collected in Java (Hort. Bog.). The description of the fruit of var. *dasycarpa* is drawn from drupes preserved at L, apparently collected by Teysmann & De Vriese in Menado. The holotype of *P. dasycarpa* preserved at U only bears ♂ flowers.

Phytocrene sp. nov.

Scandens, caule fructigero cortice longitudinaliter c. 1 mm profunde rimoso 1.8 cm diam. Ramuli graciles, setulosi, aculeis minutis retrorsis obsiti. Folia subovato-elliptica vel -oblonga, apice breviter et ± obtuse subcuspidato-acuminata, basi leviter cordata, subcoriacea, supra glabra, subitus ad costam et nervos sparse appresse setuloso-pilosa ceterum glabra, integra, (8—)10—18 cm longa, (2—)4—10 cm lata, e basi 5-nervia, pare nervorum exteriore breviter, interiore alte usque ad laminae fere medium ascendentem, nervis ceteris altius a costa abeuntibus 4—5-paribus inferne subrectis, ante marginem curvatis, omnibus subtus tantum prominentibus, reticulatione venarum venularumque denso utrinque prominulo; petioli (1—)2—3.5 cm longi. Infructescencia tantum cognita, e caule defoliato oriens, pedunculo c. 2 cm longo, c. 4 mm diam. Drupa elliptico-ovoidea, lateraliter valde forma amygdalarum compressa, 6 cm longa, 4.5 cm lata, 2 cm crassa, exocarpio in sicco irregulariter profunde lacunoso, ± dense setuloso-piloso tactuque rugoso, stylis 4 vel 5 vix 1 mm altis.

NEW GUINEA. Northern part: Cycloop Mts, Kujabu R., 75 m, fr. 10-10-1954, BW 748 Lam & Versteegh (L), on temporarily inundated soil along river in young secondary forest, scattered.

Phytocrene sp.; Engl. in E. & P., Nat. Pfl. Fam. III, 5 (1893) 256; Schellenb., Bot. Jahrb. 58 (1923) 177; Sleum., Notizbl. Berl.-Dahl. 15 (1940) 253, *nota sub P. interrupta*.

NEW GUINEA. Madang Dist., Hatzfeld Harbour, Hollnung 385 (B, †), leaves obovate, 20—30 by 14—18 cm, no flowers.

EXCLUDED

Phytocrene loheri Merr., Philip. J. Sc. 7 (1912) Bot. 29; En. Philip. 2 (1923) 492, *nom. illeg.*, Code 70. **PHILIPPINES.** Luzon: Montalban, Loher 5769 (K; PNH, type of *P. loheri*, †).

The leaves in the Kew specimen are Menispermaceous (probably belonging to *Hypserpa* sp.), whilst the loose fruits belong to *P. macrophylla* var. *macrophylla*.

18. THE GENUS PITTOSPOROPSIS CRAIB

Arb. 22 (1941) 175 (Wood-Anat.); Sleum. in E. & P., Nat. Pfl. Fam. ed. 2, 20 b (1942) 360; Back. & Bakh. v. d. Brink, Fl. Java 2 (1965) 59. — *Platystigma* R. Br. [in Wall., Cat. (1832) n. 7523, *nom. nud.*] ex. Hook. f., Ic. Pl. 18 (1887) t. 1707, *nom. illeg.*, non Benth. 1834; Pax in E. & P., Nat. Pfl. Fam. III, 5 (1890) 117; Hall. f., Meded. Rijksherb. 36 (1918) 5.

Lectotype species: *P. excelsa* Bl. (Sleum. in E. & P., Nat. Pfl. Fam. ed. 2, 20 b, 1942, 361).

KEY TO THE SPECIES

1. Indumentum on the undersurface of young leaves of a woolly appearance to the naked eye, and under a lens composed of two distinct strata, i.e. an upper layer of partly flattish, though mostly obliquely erect star-shaped or fascicled hairs (with a very small or generally invisible dark centre), and a lower layer of small scales.
 2. Leaves shortly cordate at base, almost peltate, lateral nerves, veins, and veinlets ± distinctly impressed above, the lamina ± bullate, hairs persistent. Borneo (Sarawak) 1. *P. bullata*
 2. Leaves never properly cordate at base, nerves sometimes, veins and veinlets never impressed above, hairs generally early disappearing except along midrib and nerves. Sikkim, East Bengal (Sylhet), Indochina, Kwangsi, Hainan, Sumatra, Banka, Malay Peninsula, Java, Borneo, Philippines (Mindanao), Celebes, New Guinea 2. *P. latifolia*
1. Indumentum on the undersurface of young leaves of a scaly appearance to the naked eye, consisting of one single layer of scales, or at least seemingly so.
 3. Indumentum on the undersurface of young leaves consisting under the lens of a single layer of scattered to subdensely arranged, flat, stellate scales of medium size which disappear early, the lamina becoming practically glabrous with age. Hainan, Indochina (Tonkin-Kwangtung border).
 3. *P. parvifolia*
 3. Indumentum on the undersurface of young leaves consisting under the lens of two layers of flat star-shaped scales, i.e. a 'lower' layer of ± persistent, minor, densely arranged scales, and an 'upper' layer of similar, but larger and more scattered, rather caducous scales.
 4. Leaves (elliptic or ovate-elliptic, rarely ovate coriaceous, rigid. Borneo (Mt Kinabalu).
 4. *P. sclerophylla*
 4. Leaves coriaceous to subcoriaceous, ± flexible.
 5. Leaves oblong to elliptic, rarely subovate-elliptic or -oblong, up to 4.5 (rarely —6) cm wide.
 6. Leaves ± acutely acuminate at apex, nerves 10—14 pairs, rather straight from the midrib. Drupes 3.5—4.5 by 1—2 cm. Sumatra, W. Java 5. *P. excelsa* var. *excelsa*
 6. Leaves obtusely acuminate or rounded at apex, nerves 6—8(—10) pairs, ± curved-ascending from the midrib. Drupes 2.5—3 by 1—1.5 cm.
 7. Leaves markedly finely reticulate, generally up to 6 cm wide. Sumatra, Banka, Billiton, Malay Peninsula (Johore), Borneo 5. *P. excelsa* var. *riedeliana*
 7. Leaves more faintly or hardly reticulate, generally up to 4.5 cm wide. New Guinea.
 5. *P. excelsa* var. *microphylla*

5. Leaves either ovate or ovate-elliptic, or, if elliptic or oblong-elliptic, generally wider than 6 cm.
8. Leaves shortly subacutely or obtusely acuminate, faintly reticulate in general, nerves (8—)10—12(—14) pairs, these usually rather close and/or subparallel to each other, (9—)12—17(—26) by (4.5—)6—9(—12) cm. Sumatra, Java, Bali, Lombok, Sumbawa, Flores, Borneo, Philippines, Celebes, Moluccas, New Guinea, New Britain.
5. *P. excelsa* var. *borneensis*
8. Leaves subcaudate-acuminate and subacute, ± distinctly reticulate on both faces, nerves 6—8 pairs, these curved-ascending and rather distant from each other, 8—12 by 3.5—5.5 cm. Borneo (Mt Kinabalu) 5. *P. excelsa* var. *kinabaluensis*

1. *Platea bullata* Sleum., sp. nov.

Arbor, 13—14 m alta, trunco c. 15 cm diam., cortice laevi griseo-brunneo. *Ramuli* foliigeri c. 5 mm diam., sicut petioli et rhachis in sicco longitudinaliter sulcati, rufo-brunneo-tomentosi. *Folia* laxa, subobovato-elliptica vel -oblonga, apice per c. 1.5 cm subacute acuminate, basi rotundata, ipsa basi breviter cordata quasi peltata, firme chartacea, in sicco opaca et olivaceo- vel (imprimis subtus) rufescenti-brunnea, matura supra ad costam et nervos breviter, subtus per faciem laxe, ad costam, nervos et venas densius et paullo longius pilis stellatis vel fasciculatis oblique erectis persistentibus tomentosa tactuque mollia, ultro subtus per totam faciem lepidibus stellatis (pilastellata aemulatibus) minutis planis et omnino appressis in sicco argenteo-albescentibus induta, 14—32 cm longa, (6—)7—13 cm lata, costa, nervis, venis et parte venularum supra leviter sed distincte impressis, subtus prominentibus, nervis lateralibus 7—10(—12)-paribus leviter curvato-ascendentibus interque sese arcuato-conjunctis, reticulatione minuta densissima supra parum elevata, subtus sat obscura; petioli 2—2.5 cm longi, 2—3 mm crassi. *Paniculae* ♂ parum evolutae tantum cognitae, axillares, e racemis paucis densifloris subspicatis vel breviter paniculatum ramosis inter sese bene distantibus 1.5—3 cm longis formatae; rhachis 6—12 cm longa, 2—3 mm crassa. *Flores* pro descr. nimis juveniles.

BORNEO. Sarawak: 3rd Div., Rejang, Carapa Pila, Ulu Pila, in steep sided valley in basalt beside waterfall, in mixed Dipterocarp forest at 900 m, fl. ♂, 9-4-1964, S 19638 P.S. Ashton (A, n.v.; BO, K, KEP; L, type; MEL, SAN, SING).

New Guinea: Noord R., near Alkmaar, 30 m, *Pulle (Versteeg) 1576* (BO, K, L; U, type of *Chariessa caulinflora*). — Sepil Dist.: August R., NGF 3815; Mori village, 60 m, NGF 19524. — Western Dist.: Palmer R., 100 m, *Brass 7005*. — Morobe Dist., Wau-Salamaua road, Skindeway, 1645 m, NGF 8466.

22. THE GENUS PYRENACANTHA HOOK. IN MALESIA

PYRENACANTHA

Hook., Bot. Misc. 2, 4 (1830) 107, Suppl. t. 9 & 10, *nom. cons.*; R. Br. in Benn. & Br., Pl. Jav. Rar. (1852) 245. — *Freeria* Merr., Philip. J. Sc. 7 (1912) Bot. 292; Engl. in E. & P., Nat. Pfl. Fam. Nachtr. 4 (1915) 190.

***Pyrenacantha repanda* (Merr.) Merr., En. Philip., 2 (1923) 492. — *P. sp.*, Ceron, Cat. Pl. Herb. Manila (1892) 46. — *Freeria repanda* Merr., Philip. J. Sc. 7 (1912) Bot. 292. — *Tragia luzoniensis* Merr., Philip. J. Sc. 16 (1920) 564.**

PHILIPPINES. Luzon: Ilocos Norte, Burgos, B.S. 32854 (K; PNH, type of *Tragia luzoniensis*, †); Bulacan, *Vidal 2387* (K); Tayabas, Kabibihan, B.S. 13289 (K; PNH, type of *Freeria repanda*, †); Sorsogon, Mt Bulusan, Irosin, *Elmer 17359* (as *Freeria strangei* ms.). — Samar: B.S. 24369 (PNH, cited by Merrill, †). — Mindanao, Surigao, B.S. 34929 (PNH, cited by Merrill, †), *Wenzel 2607* (A, n.v.; K, UC), 2667 (A, n.v.; BO, G. K.) 3290 (UC).

23. A REVISION OF THE GENUS RHYTICARYUM BECC.

RHYTICARYUM

Becc., Malesia 1 (1877) 120, t. 5, f. 18—25 ('*Ryticaryum*'); ditto (1878) 256 (corr.: *Rhyticaryum*); Valet., Crit. Overz. Olacinae (1886) 256; Boerl., Handl. 1, 1 (1890) 215 ('*Ryticaryum*'); Engl. in E. & P., Nat. Pfl. Fam. III, 5 (1893) 250; K. Sch. & Laut., Fl. Schutzgeb. (1900) 415 ('*Rhytidocaryum*', non F. v. M. 1883); Post & Ktze., Lex. Gen. Phan. (1904) 485 ('*Ryticaryum*'); Schellenb., Bot. Jahrb. 58 (1923) 166 ('*Rhyti(do)caryum*''); Sleum. in E. & P., Nat. Pfl. Fam. ed. 2, 20 b (1942) 376. — *Pocillaria* Ridl., Trans. Linn. Soc. II, Bot. 9 (1916) 28.

Lectotype species: *R. oleraceum* Becc.; cf. Sleum. in E. & P., Nat. Pfl. Fam. ed. 2, 20 b (1942) 376.

KEY TO THE SPECIES

1. Flowers in the same specimen both in axillary (rather lax) spikes *and* in panicles composed of such spikes. New Guinea 1. *R. novoguineense*
1. Flowers exclusively in axillary spikes (these sometimes very short in ♀ specimens, the flowers seemingly fascicled then).
 2. Both ♂ and ♀ inflorescences very laxly appressedly hairy, i.e. practically glabrous to the naked eye.
 3. Leaves becoming purplish when dried. ♂ Spikes longer than 20 cm. New Guinea.
 2. *R. purpurascens*
 3. Leaves becoming brownish or blackish green, or remaining green-yellowish when dried. ♂ Spikes in general shorter than 20 cm.
 4. Base of leaves properly rounded. New Guinea. 3. *R. rotundatum*
 4. Base of leaves attenuate, rarely almost rounded and cuneate in the same specimen.
 5. Drupe 3.5—4.3 by 2.5—3 by c. 1.5 cm. New Guinea. 4. *R. macrocarpum*
 5. Drupe much smaller, rarely up to 2.6 by 1.5 cm.
 6. Leaves blackish green and hardly reticulate above in the dry state, nerves 6—7 pairs. ♀ Spikes lax-flowered, laxly hairy. New Guinea 5. *R. lucidum*
 6. Leaves greenish yellowish, or maybe greenish greyish in the dry state, reticulation generally distinct (at least slightly prominent) above.
 7. Flowers laxly arranged, i.e. (much) spaced. Basal pair of nerves curved-ascendent, upper pairs ± rectangularly from the midrib and straight. Rachis slender. New Guinea 6. *R. elegans*
 7. Flowers (sub)densely arranged. Nerves of leaves all ± distinctly curved-ascendent.
 8. Leaves membranous to chartaceous, with a very fine and very dense prominent reticulation on both faces, nerves (10—)12—14 pairs. Tanimbar Is., Moluccas (Ceram, Amboina, Morotai, Batjan), Sula Is., Kai Is., New Guinea.
 7. *R. oleraceum*
 8. Leaves subcoriaceous to thin-coriaceous, reticulation more coarse, nerves 6—8(—10) pairs. New Guinea 8. *R. oxycarpum*
 2. Both ♂ and ♀ inflorescences ± densely set with brownish substrigose hairs (tomentose in juvenile state).
 9. ♂ Flowers ± distant from each other along the rachis.
 10. Rachis filiform. Leaves with 6—8 pairs of nerves. New Guinea. 9. *R. gracile*
 10. Rachis slender. Leaves with 8—10 pairs of nerves. New Guinea. 10. *R. racemosum*
 9. ♂ Flowers close to each other along the ± stoutish rachis.
 11. Spikes very short (c. 6 mm), the few flowers together almost in a fascicle. Leaves thin. New Guinea. 11. *R. fasciculatum*
 11. Spikes longer to elongate (rachis at least 1 cm) and with numerous flowers. Leaves firm. New Guinea, Solomon Is., Australia (Queensland). 12. *R. longifolium*

I. *Rhyticaryum novoguineense* (Warb.) Sleum., comb. nov. — *Buchanania novoguineensis* Warb., Bot. Jahrb. 13 (1891) 363.

New GUINEA. Madang Dist.: Hatzfeldhafen, Warburg a. 1889 (B, syntype of *Buchanania novoguineensis*, †). Morobe Dist.: Satelberg, 600 m, Warburg a. 1889 (B, syntype of *Buchanania novoguineensis*, †); near Skindeway, Wau-Salamaua road, 1645 m, fl. ♂, 6-1-1956, NGF 8386 (A, n.v.; K, L).

Note. The combination made above is based in the first place on a remark in Lauterbach's Revision of the *Anacardiaceae* of New Guinea (Bot. Jahrb. 56, 1921, 349), that Warburg's species belongs to *Rhyticaryum*, though Schellenberg in his work on the *Icacinaceae* (Bot. Jahrb. 58, 1923, 166) does not mention it. Possibly, the material of *Buchanania novoguineensis* was not transferred yet to *Rhyticaryum* in the Berlin Herbarium when Schellenberg revised the latter. As there is only one species known in *Rhyticaryum* to have compound inflorescences, and the NGF material cited above matches the original description in practically all characters given, it seems advisable, rather to make the new combination than to describe a new species. Warburg's original specimens of *Buchanania novoguineensis* are lost, and no isotypes or fragments could be traced.

2. Rhyticaryum purpurascens Schellenb., Bot. Jahrb. 58 (1923) 172.

NEW GUINEA. Sepik Dist.: Leonhardt Schultze R., 20—50 m, *Ledermann* 7756 (B, type, †).

3. Rhyticaryum rotundatum Schellenb., Bot. Jahrb. 58 (1923) 172.

NEW GUINEA. Sepik Dist.: Sepik R., 20—30 m, *Ledermann* 12277 a (B, type, †).

4. Rhyticaryum macrocarpum Becc., Malesia 1 (1878) 256; Valet., Crit. Overz. Olacinae (1886) 257; Schellenb., Bot. Jahrb. 58 (1923) 173.

NEW GUINEA. Sepik Dist.: August R., fr., *NGF* 3816 (A, n.v.; BO, K, L). — Western Dist.: Fly R., fr., *d'Albertis* a. 1876 (Fl: Herb. Beccari 2484, 2486, 2489, type material of *R. macrocarpum*; MEL, n.v.). — Vogelkop Peninsula: Kebar, Asiti, 475 m, fr., *BW* 11381; ibid., 445 m, fl. ♂, *BW* 11366.

5. Rhyticaryum lucidum Schellenb., Bot. Jahrb. 58 (1923) 175.

NEW GUINEA. Sepik Dist.: Hunstein Mts, 1300 m, *Ledermann* 11262 (B, type, †).

6. Rhyticaryum elegans Schellenb., Bot. Jahrb. 58 (1923) 174; Birnie, Nova Guinea 14 (1926) 276; Dahl, J. Arn. Arb. 33 (1952) 276 (Pollen).

NEW GUINEA. Western part: Wandammen Peninsula, Wondiwoi Mts, 800—1050 m, *BW* 13351, 13648, 13692; Wisel Lakes, Mt Digatara, 2250 m, *Eyma* 5376. — Southern part: Lorentz R., 1350 m, *von Römer* 1019 (BO, L). — Central part: Bele R., 18 km NE of Lake Habbema, 2300 m, *Brass* 11059. — Madang Dist.: Bismarck Mts, northern foothills, 1000 m, *Schlechter* 18681 (B, type of *R. elegans*, †; P, UC). — Central Dist.: Lala R., 1675 m, *Carr* 14053.

7. Rhyticaryum oleraceum Becc., Malesia 1 (1877) 121, t. 4, f. 18—21; Valet., Crit. Overz. Olacinae (1886) 257; Schellenb., Bot. Jahrb. 58 (1923) 173. — *R. parviflorum* Pulle, Nova Guinea 8 (1912) 659; Schellenb., Bot. Jahrb. 58 (1923) 173. — *R. oncocarpum* (non K. Sch. & Laut.) Birnie, Nova Guinea 14 (1926) 276.

LESSER SUNDA Is. Tanimbar Is: P. Jamdena, Otimmer, *Buwalda* 4306, 4471.

MOLUCCAS. Ceram: Roho, 100—200 m, *Kornassi* (*Exp. Rutten*) 503; Hatuolo, 600 m, *Kornassi* (*Exp. Rutten*) 1544; Mt Murkele, 1000—1900 m, *Kornassi* (*Exp. Rutten*) 1450 (BO); Mt Pipilaina-Manusela, *Eyma* 1935 a; Wahai, *Treib* a. 1893 (BO); Kaniki, 600 m, *Kornassi* (*Exp. Rutten*) 1396. — Morotai: Mt Sangowo, 900 m, *Kostermans* 1109; Mt Sabatar, 200 m, *Lam* 3571 (L). — Sula Is: P. Mangoli, 10 m, *Bloembergen* 4685 (L). — Amboina: *Teymann*; Mt Horiel, *Boerlage* 48; Mt Latua, *Boerlage* 471, 480. — Batjan: *Vorderman* 23 (BO).

KAI Is. Great Kai, westcoast, Weri, *Beccari* a. 1873 (Fl, Herb. n. 2479, fl. ♂ & fr., lectotype of *R. oleraceum*; n. 2483, fr. n. 2483 A, defl. n. 2483 B, fr., Fl, syntypes); Pulu ubur, *Warburg* 20215 (B, †, cit. Schellenberg). No locality given: *Jaheri* 82 & 156, fl. ♂ (BO, L).

NEW GUINEA. Northwestern part: Geelvinkbay, 40 km inward Nabire, 100 m, *Kanehira* & *Hatusima* 12847 (BO); Napan, Waobu, *Satake* & *Niimura* 710. — Southern part: Lorentz (Noord) R., *von Römer* 333, fr. (BO, L); Sabankamp, *Versteeg* 1354, fl. ♂ (BO; L, type of *R. parviflorum*); Bivak I., 40 m, *Pulle* 2, 37, 60, 1233 (all BO & L); Southcoast near Uta, 3—4 m, fr., *Aet* (*Exp. Lundquist*) 338, 373, 389.

8. Rhyticaryum oxycarpum K. Sch. & Laut., Fl. Schutzgeb. (1900) 416; Schellenb., Bot. Jahrb. 58 (1923) 175. — *R. pulchrum* Schellenb., Bot. Jahrb. 58 (1923) 173. — *R. urophyllum* Schellenb., l.c. 174.

NEW GUINEA. Madang Dist., Ramu R., 100 m, *Lauterbach* 2502 (B, type of *R. oxycarpum*, †; WRSL, fragm. fol. & fr. ex B). — Sepik Dist.: April R., 20—40 m, *Ledermann* 7164 (fr., B, †), 8768 (fl. ♂, B, †, K); ibid., 'Pyramide', 100—200 m, fl. ♂, *Ledermann* 7564 (B, type of *R. urophyllum*, †; K); ibid., 'Lordberg', 1000 m, fl. ♀, *Ledermann* 10211 (B, type of *R. pulchrum*, †; K, sub '20211'; L); Wewak-Angoram area, near Kanduanan village, c. 25 m, *Pullen* 1781, fl. ♂.

Note. I find no essential differences between the 3 species lumped above, though the leaves of the type of *R. oxycarpum* are slightly less markedly reticulate than the leaves of the other specimens.

9. Rhyticaryum gracile Schellenb., Bot. Jahrb. 58 (1923) 170.

NEW GUINEA. Sepik Dist.: Sepik R., Hauptlager Malu, 200 m, fl. ♂ juv., *Ledermann 10114 b* (B, syntype, †); Upper April R., 'Lordberg', 1000 m, fl. ♂ juv., *Ledermann 10180* (B, lectotype, †; K).

10. Rhyticaryum racemosum Becc., Malesia 1 (1877) 121, t. 4, f. 22 & 23; Valet., Crit. Overz. Olacin. (1886) 257; Schellenb., Bot. Jahrb. 58 (1923) 168, as to the type only.

NEW GUINEA. Vogelkop Peninsula: Sorong (Ramoij), fr., *Beccari P.P. 264* (FI, type); Klamono SE. Sorong, 20 m, fl. ♂, *Pleyte 574, 734*; Cape Casuaris, N. of Sorong, 2 m, fr., *van Royen 3129*; Road from Steenkool to Tambuni, 45 m, fr., *van Royen 3448*.

11. Rhyticaryum fasciculatum Becc., Malesia 1 (1877) 121, t. 4, f. 24 & 25; Valet., Crit. Overz. Olacin. (1886) 257; Schellenb., Bot. Jahrb. 58 (1923) 168.

NEW GUINEA. Vogelkop Peninsula: Amberbaken (country along N. coast W. of Manokwari), fr., *Beccari anno 1872* (FI, Herb. Beccari 2478 & 2480, type); Andai near Manokwari, fl. ♀ (= f. 24 & 25), *Beccari a. 1872* (FI, Herb. Beccari 2481, not mentioned in the original descr.); *ibid.*, fr., *Tuyama 1085*; Momi, 60 miles S. of Manokwari, 30 m, *Kanehira & Hatusima 13278* (BO).

12. Rhyticaryum longifolium K. Sch. & Laut., Fl. Schutzgeb. (1900) 415; Nachtr. (1905) 306. — *R. oncocarpum* K. Sch. & Laut., Fl. Schutzgeb. (1900) 416; Schellenb., Bot. Jahrb. 58 (1923) 171. — *R. ? oxycarpum* (*non* K. Sch. & Laut.) Valet., Bull. Dep. Agric. Ind. Néerl. 10 (1907) 30. — *Pocillaria pubescens* Ridl., Trans. Linn. Soc. II, Bot. 9 (1916) 28. — *R. bullatum* Schellenb., Bot. Jahrb. 58 (1923) 169. — *R. oblongum* Schellenb., l.c. 169. — *R. elongatum* Schellenb., l.c. 170. — *R. ovale* Schellenb., l.c. 171. — *R. racemosum* (*non* Becc.) Schellenb., l.c. 168; Birnie, Nova Guinea 14 (1926) 276. — *Antidesma megalocarpum* Sp. Moore, J. Bot. 61 (1923) Suppl. 46. — *R. pubescens* (Ridl.) Sleum., Notizbl. Berl.-Dahl. 15 (1940) 250.

NEW GUINEA. Vogelkop Peninsula: Arfak Mts, trail from Momi to Anggi Gita Lake, 500 m, *Kostermans 2057*. — Southern part: Lorentz R., Alkmaar, 750 m, *von Römer 933* (L); Utakwa R. to Mt Carstensz, camp I, 520 m, *B.C. Kloss a. 1912* (BM, type of *Pocillaria pubescens*); *ibid.*, camp VI a & b, *B.C. Kloss a. 1913* (K). — Wandammen Peninsula: Wondiwori Mts, 300—900 m, *BW 10656, 10666, 13582*. — Japen: Woda, 60 m, *BW 11192*. — Northern part: Idenburg R., Bernhard camp, 175 m, *Brass 13869*; Cyclooop Mts, Mt Singajam near Hollandia, *Atasip 221*; Hollandia, 50 m, *Meijer Drees 234*; Lake Sentani, 75 m, *BW 4807, 4833*; Road from Netar to Northcoast, 900 m, *Meijer Drees 7*; *ibid.*, path Ifar-Ormu, 1200—1270 m, *van Royen 3627, van Royen & Sleumer 6136*. — Western Dist.: Lower Fly R., Gaima, *Brass 8375*. — Western Highl.: Upper Kaugel R. valley, 2500 m, *Bowers 84*; Wabag, Pokaris, 2000 m, *ANU 2858 Flenley*; Nondugl, *NGF 4332*. — Sepik Dist.: Aitape, along Bliri R., 75 m, *Darbyshire & Hoogland 8184*. Sepik R., Malu, 50—100 m, *Ledermann 8012* (E, K), *10451* (B, †), *10866* (B, †); *ibid.*, 'Peilungsberg', 100—150 m, *Ledermann 6916* (K); Frieda R., 300—400 m, *Ledermann 7486* (B, †, syntype of *R. ovale*; K); May R., 50—100 m, *Ledermann 7329* (B, type of *R. elongatum*, †); April R., 50—200 m, *Ledermann 8615* (B, †), *8797* (B, lectotype of *R. ovale*, †; K); West Ra., 'Felspitze', 1400—1500 m, *Ledermann 13497* (B, syntype of *R. bullatum*, †), *12967* (B, lectotype of *R. bullatum*, †; BM, K). — Madang Dist.: Malia R. (one of the affluents of the Ramu R.), 150 m, *Schlechter 18412* (P); Ramu R., *Tappenebek 39* (B, lectotype of *R. oncocarpum*, †; WRSL, fragm. ex B); Constantinhafen, fl. ♂, *Schlechter 14280* (BM, BO, G, K, L, P, WRSL); Finisterre Mts, 150 m, *Schlechter 18146* (B, †). — Morobe Dist.: Lae, Oomsis logging area, 600 m, *NGF 14305*; Busu R., 60 m, *Hartley 11342*; Wagau, 1340—1400 m, *NGF 21515, 23471*; Finschhafen, Kelana Station, Hellwig 175 (K, L); *ibid.*, Ibekippo near Bonga, *Lauterbach 773* (B, type of *R. longifolium*, †; WRSL, fragm. ex B); Sattelberg area, 800—1220 m, *Lauterbach 561* (B, syntype of *R. oncocarpum*, †); *Nyman 429* (C, S, UPS), *Clemens 295, 749* (fasciation), *1028, 1058*; *ibid.*, Heldsbach, 30 m, *Clemens 118* (L, with pubescent leaves, fr.); Wau, Kuali Creek, 1220 m, fl. ♀, *Hartley 11478*; Wau-Salamaua

road, 1800 m, NGF 8315; Bulolo, 600—1065 m, NGF 7462, 21104, Hartley 9979; Waria R. valley, Garaina, 1000 m, Hartley 10385; above Wakaina, 1220 m, NGF 26433; Waube Bach, 400 m, Schlechter 19432 (B, type of *R. oblongum*, f; P). — Central Dist.: Yodda R., 1370 m, Carr 13922; Sogere, Forbes 225 (BM, K), 417 (BM), 497 (BM, type of *Antidesma megalocarpum*); Boridi, 1000—1065 m, Carr 14735, 14970; Isuarava, 1220 m, Carr 16090; Brown R., Karema, 15 m, Schodde 2598; Koitaki, 450 m, Carr 11903, 12569, 12799; Dieni, Ononge road, 500 m, Brass 3878; Mt Scratchley, 1220 m, Giulianetti a. 1896 (K). — Northern Dist.: Kokoda, 325 m, Hoogland 3958. — Milne Bay Dist.: Mt Dayman, Maneau Ra., 700 m, Brass 23559; Rossel I., 700 m, Brass 28391.

SOLOMON IS. Bougainville: Waterhouse Y 87 (K), NGF 30581, 31098; SW. of Crown Prince Ra., 910 m, Voyce B 5; Kieta, 100 m, Kajewski 1609; Koniguru, Buin, 900 m, Kajewski 2072; Barapinang, Cole 26; Lake Lotoru, W. of Buin, 700—790 m, Schodde (& Craven) 3774, 3831. — Wagina I.: BSIP 5453, 5538. — Guadalcanal: Whitmore 6009, 6081; Popomanasiu, 900 m, Corner (Roy. Soc. Exp.) 146; Vulolo, Mt Tutuve, 1200 m, Kajewski 2585. — New Georgia group: Gizo I., BSIP 5588, 11744; Vangunu I., BSIP 1245; Baga I., BSIP 3059. — Malaita: BSIP 3426, 10278. — San Cristobal, Wairaha R., BSIP 4317; Ulawa I., BSIP 6218.

AUSTRALIA. Queensland: Cape York Peninsula, Iron Ra., 20—50 m, Brass 19054, 19264.

INCOMPLETE MATERIAL

Rhyticaryum sp.

NEW GUINEA. Nassau Mts, Explor. biv., 700 m, fl. ♂, Docters van Leeuwen 10611 (L).

Rhyticaryum sp.

NEW GUINEA. Mamberamo R., opp. Albatros biv., 75 m, fl. ♂ juv., Docters van Leeuwen 9542 (BO, K, L).

Rhyticaryum sp.

NEW GUINEA. 'Meervakte', Motor biv., Albatros R., 100 m, fr. mat., Docters van Leeuwen 11050 (BO, K, L).

Rhyticaryum sp.

NEW GUINEA. Vogelkop Peninsula: Arfak Mts, near Iray, 1900 m, fr., Kanehira & Hatusima 13769 (BO).

Rhyticaryum sp.

NEW GUINEA. Central Mts, Swart Valley, Kadubaka, 1600—2000 m, fl. ♂, D. Bergman 336 (L, S).

NEW BRITAIN. Kandrian, Pulie R., 30 m, NGF 27231; Pirilongi village, 400 m, fr., NGF 21932; Arawe area, Omoi, 3 m, fl. ♂ juv., NGF 26543.

Similar in leaves to *R. longifolium* K. Sch. & Laut., but drupes larger.

Rhyticaryum sp.

NEW IRELAND. Ugana, Lelet Mts, 600 m, fr., Peekel 113 (L).

ADMIRALTY IS. Fl. ♂ juv., Manus, Moseley Exp. (K).

24. THE GENUS SARCOSTIGMA W. & A. SARCOSTIGMA

W. & A., Edinb. New Phil. J. 14 (1833) 299; R. Br. in Benn. & Br., Pl. Jav. Rar. (1852) 244; Miers, Ann. Mag. Nat. Hist. II, 10 (1852) 116, repr. Contr. Bot. 1 (1852) 103, p.p.; Baill., Hist. Pl. 5 (1874) 338; Boerl., Handl. 1, 1 (1890) 221; Engl. in E. & P., Nat. Pfl. Fam. III, 5 (1893) 253; Sleum. in *ditto* ed. 2, 20 b (1942) 382; Back. & Bakh. v. d. Brink, Fl. Java 2 (1965) 62.

In the genus only two species can be distinguished, which are easily recognized by their inflorescence type. The holo- resp. isotypes of the Asiatic species, part of which are considered here as synonyms, have been checked in various herbaria.

KEY TO THE SPECIES

- i. Flowers in simple racemes, ♂ ones sessile, ♀ ones pedicelled. India (Western Ghats from Concan and N. Kanara to Travancore), Lower Burma, Andamans, S. Annam, Malesia (Malay Peninsula, Java).
 - i. S. kleinii
- ii. Flowers in panicles, ♂ and ♀ ones sessile. Cochinchina, Sumatra, Malay Peninsula, Borneo, Philippines
 - ii. S. paniculata.

1. Sarcostigma kleinii W. & A., Edinb. New Phil. J. 14 (1833) 299; Miers, Ann. Mag. Nat. Hist. II, 10 (1852) 116, repr. Contr. Bot. 1 (1852) 103, pl. 18; Wight, Ic. 5, 2 (1852) t. 1854; Dalz. & Gibbs., Fl. Bombay (1861) 221; Baill., Adansonia 3 (1863) 365; in DC., Prod. 17 (1873) 15; Mast. in Hook. f., Fl. Br. Ind. 1 (1875) 594; Brandis, Ind. Tr. (1906) 153, f. 71; Gamble, Fl. Pres. Madras 1 (1915) 199; Ridl., Fl. Mal. Pen. 5 (1925) 297; Kirtikar & Basu, Ind. Med. Pl. ed. 2, 1 (1935) 570, t. 233. — *S. horsfieldii* R. Br. in Benn. & Br., Pl. Jav. Rar. (1852) 241, t. 47; Miers, Ann. Mag. Nat. Hist. II, 10 (1852) 118, repr. Contr. Bot. 1 (1852) 105; Miq., Fl. Ind. Bat. 1, 1 (1856) 795; Hassk., Hort. Bog. Retziae ed. nov. (1858) 360; Schnizl., Ic. 3 (1857/65) t. 172, f. 32 & 33; Baill. in DC., Prod. 17 (1873) 16; Becc., Malesia 1 (1877) 125; Hochr., Bull. Inst. Bot. Btzg 19 (1904) 39; Pl. Bog. Exs. (1904) 16; Koord., Junghuhn Gedenkb. (1910) 175; Back., Schoolfl. Java (1911) 229; Koord., Exk. Fl. Java 2 (1912) 533; Koord.-Schum., Syst. Verz. 1, Fam. 162 (1912) 5; Amsh. in Back., Bekn. Fl. Java (em. ed.) 6 (1948) fam. 135, p. 7; Dahl, J. Arn. Arb. 33 (1952) 276 (Pollens); Back. & Bakh. v. d. Brink, Fl. Java 2 (1965) 62. — *S. wallichii* Baill., Adansonia 10 (1872) 282; in DC., Prod. 17 (1873) 16; Mast. in Hook. f., Fl. Br. Ind. 1 (1875) 594; Kurz, J. As. Soc. Beng. 44, ii (1875) 156; King, ditto 64, ii (1895) 125; Brandis, Ind. Tr. (1906) 154; Dahl, J. Arn. Arb. 33 (1952) 277 (Pollens); Hundley & Chit, List Trees Burma ed. 3 (1961) 46. — *S. edule* Kurz, J. As. Soc. Beng. 41, ii (1872) 298; Mast. in Hook. f., Fl. Br. Ind. 1 (1875) 594; Kurz, For. Fl. Br. Burma 1 (1877) 242.

For specimens outside Malesia cf. also the literature cited above.

INDOCHINA. Annam: Prov. Nhatrang, massif de la Mère et de l'Enfant, 600 m, Poilane 6677 (P).

MALAY PENINSULA. Perak: Slim Hills, Sg. Geliting, 600 m, FRI 729. — Kelantan: Sg. Keteh, SF 12013; Sg. Lebir, base of Bukit Batu Papan, SF 29569. — Selangor: Ulu Langat, Phytochem. Surv. Malaya 828, 1448. — Malacca: Maingay 378; Jasin, Batang Melaka F. R., 100 m, KEP 94804. — No locality given: Furtado K.H. 828 bis.

JAVA. Djakarta: Bongkok near Purwakarta, 550 m, Backer 13914. — Bogor: cult. Hort. Bog., Hochreutiner 23. — Priangan: Bolang, 400 m, van Steenis 2164. — Semarang: Kedungjati, Koorders 25355, 28167. — Rembang: Ngandang, 150 m, Koorders 36467. — Jogjakarta: Prambanan, Junghuhn Pl. Ined. 525. — Madiun: Patjitan ('Pagetan'), Horsfield a. 1809 (cit. Rob. Brown and Baillon, syntype of *S. horsfieldii*, apparently lost, i.e. not in BM, K, P, P-Baillon); Mt Pandan, 400—900 m, Elbert a. 1907 (BO). — Kediri: Krandang, den Berger 397; Utan Pandjang near Badjulan, 300 m, den Berger a. 1920; Gadungan Pare, Koorders 22860. Tegal, Beumée 4393. — Malang: Peteng near Sumberputjung, Beumée 2873. — Besuki: Tjuramanis-Simpolan, Koorders 28768; Rogodjampi, Koorders 29015; *in silvæ* inter Blimbungan et Tagal, XI-1858, Zollinger 3991 (L); Blambangan, Horsfield a. 1806 (cit. Rob. Brown and Baillon, syntype of *S. horsfieldii*, apparently lost, i.e. not in BM, K, K-Horsfield, P). — Locality not given: Leschenault 534 (P).

2. Sarcostigma paniculata Pierre, Bull. Soc. Linn. Paris 2 (1897) 1319; Gagnep., Fl. Gén. I.-C. 1 (1911) 841, f. 102, 1—3, incl. var. *angustifolia* (Pierre) Gagnep., I.c. 842; Ridl., Fl. Mal. Pen. 5 (1925) 298. — *S. angustifolia* Pierre, Bull. Soc. Linn. Paris 2 (1897) 1320. — *S. philippinensis* Merr., Philip. J. Sc. 10 (1915) Bot. 276; En. Philip. 2 (1923) 492; Dahl, J. Arn. Arb. 33 (1952) 276, f. 71 (Pollens). — *S. surigaoensis* Elm., Leafl. Philip. Bot. 10 (1939) 3749, nom. illeg. (Code art. 36); Dahl, J. Arn. Arb. 33 (1952) 277 (Pollens).

INDOCHINA. Cochinchina: Bien-hoa, prope Chiao Khan, Pierre 1888 (K; P, type of *S. angustifolia*); ibid., Monts Lu, Pierre 1644 (A, n.v.; K; P, type of *S. paniculata*).

SUMATRA. Riouw: Indragiri, Pangian, Buwalda 6292 (BO, L); Kateman I., sea-level, de Haan 87 (BO).

MALAY PENINSULA. Perak: Larut, 150 m, King's Coll. 7334 (K).

BORNEO. Sarawak: 3rd Div., Kapit, Upper Rejang R., Clemens 21048 (BO, K). — Brunei: Temburong, mile 1½ Bangar—Batu Apas road, SAN 17107; Bangar, 50 m, Ashton BRUN 3313, 3373. — N. Borneo: Mt Kinabalu, Ranau, 1370 m, SAN 44670; Lahat Datu, Diwata F. R., 30 m, SAN 39985; ibid., Takun Quarry Hill, Kennedy Bay, 100 m, ft., SAN 26117; Tawau, mile 15, Apas road, SAN 24459; mile 15, Quoin Hill road, SAN 32937; Elopura, Suan Lamba, For. Dep. N. Borneo 10624 Puasa & Enggoh (K); Kinabatangan, Tanegang Besar, SAN 51832; Sandakan, Sekong camp, 40 m, SAN 34938 (SAR).

PHILIPPINES. Leyte: Buenavista near Jaro, 500 m, Wenzel 987 (A, n.v.; BM, G; PNH, type of *S. philip-*

pinensis, †). — Mindanao: Agusan, Cabadbaran, Mt Urdaneta, 1065 m, fl. ♂, Elmer 13732 (A, n.v.; BO, C, FI, G, K, L, P; PNH, syntype of *S. surigaoensis*, †; S); ibid., fr., Elmer 13930 (A, n.v.; BM, BO, C, FI, G, L, P; PNH, lectotype of *S. surigaoensis* †; S). — Samar: Mt Candayo, Catarman, 200 m, PNH 14563.

25. A REVISION OF THE GENUS STEMONURUS BL. EMEND. BECC.

STEMONURUS

Bl., Bijdr. (1826) 648, p.p.; Hassk., Cat. Hort. Bog. (1844) 214 ('*Stemonura*'); Bl., Mus. Bot. Lugd. Bat. 1 (1850) 249, p.p. *lectotypus*; Miers, Ann. Mag. Nat. Hist. II, 10 (1852) 30, 34, p.p., repr. Contr. Bot. 1 (1852) 80, 85, p.p.; Thwait., En. Pl. Zeyl. (1858) 43; emend. Becc., Malesia 1 (1877) 108, 109, 111; Valet., Crit. Overz. Lectotype species: *S. secundiflorus* Bl.

Note. *Stemonurus* in Blume's original circumscription of 1826 comprises 4 species: *S. javanicus* with ♂ flowers, *S. pauciflorus* with ♀ flowers (this is the ♀ plant of *S. javanicus*) and *S. secundiflorus* with hermaphrodite flowers in Sect. 1 (*Stemonurus*), and *S. frutescens* Bl. (with hermaphrodite flowers) in Sect. 2 *Anacolosa*. Howard (J. Arn. Arb. 21, 1940, 464; Lloydia 6, 1943, 144) stresses that the generic description is based on the dioecious *S. javanicus* (incl. *S. pauciflorus*) by a majority of characters, and that *S. secundiflorus* is only represented by the character of hermaphrodite flowers. This is true as far as only 'limiting' characters are considered — though obviously also the character 'flores spicati' points much more distinctly to *S. secundiflorus* than to *S. javanicus* in my opinion — but there are numerous other characters mentioned which are applicable to both *S. javanicus* and *S. secundiflorus*. There is no doubt at all that both species are included in this first description of the genus.

In 1850 Blume made the section *Anacolosa* a proper genus, and gave a description of what he considered now to represent *Stemonurus*, emending and enlarging his 1826 description of the genus considerably. He added a plate with details of *S. secundiflorus* and described 7 new species (3 of which, as we know to-day, belong to *Gomphandra*, others to *Gonocaryum*). Howard says, that Blume here 'did not merely alter or amplify his original description but described an entirely different genus'. I cannot follow this extravagant argumentation. First, it is clear that Blume still wanted to include the dioecious species in *Stemonurus* — at least 4 'limiting' characters apply only to *S. javanicus* —, secondly, among these new species added is one, *S. parviflorus*, of which Blume says '*S. javanico maxime affinis*'.

Among the subsequent botanists dealing with *Stemonurus sensu* Blume the confusion is still maintained by Miers (1852) and Bentham (1862), and it was Beccari in 1877 who first divided *Stemonurus* Bl. into two distinct genera, applying the name *Stemonurus* to

that combination of characters which is found in *S. secundiflorus*, and naming *Gomphandra* Wall. that part which points to those of *S. javanicus*.

Under the Code this first quite free decision made by Beccari (and *not* by Koorders & Valeton in 1900, as repeatedly stated by Howard, who ignores completely Beccari's decision) has to be respected, as it cannot be proved, that he was wrong. Subsequent authors followed Beccari's decision: Valeton (1886), Boerlage (1890), Koorders & Valeton (1900), Valeton (1901), Hochreutiner (1904, 1905), Gagnepain (1911), Gamble (1915), Ridley (1922), Merrill (1923), Sleumer (1940, 1941, 1942), Merrill (1942), Amshoff in Backer (1948), and Backer & Bakhuizen v. d. Brink (1965).

The contrary view — the choice of *Stemonurus javanicus* as a lectotype — has been expressed by O. Kuntze (1891) on a '2/3 majority reasoning', practically the same as given by Howard; he was followed by Engler (1893), Schellenberg (1923), Handel-Mazzetti (1931), Howard (1940, 1943), and Dahl (1952).

KEY TO THE SPECIES

1. Flowers uni- or biserrate along the whole or at least the upper part of the branches of the umbel, generally 5—12 per branch (when only 3 flowers are present, one of them terminal, the other 2 lateral). 'SECUNDIFLORI'.
 2. Bracts at the base of the umbel persistent for a while during anthesis, (3—)4—5 by c. 1 mm.
 3. Leaves (18—)26—36 by 7—11(—13) cm, very coriaceous, generally a little shining above only in the dry state, nerves 15—20 pairs, generally very slightly or hardly raised on both faces, veins ± obscure. Drupe ellipsoid-ovoid, 2—2.4 by 1.2—1.5 cm. Borneo 1. *S. grandifolius*
 3. Leaves 11—23(—30) by 6—9(—11) cm, coriaceous, generally shining on both faces in the dry state, nerves 15—20 pairs, slightly though markedly raised on both faces as are the rather lax veins. Drupe ovoid-ellipsoid, 4.5—5.5(—6.5) by 2—2.5(—3) cm. Sumatra, Simalur, Riouw Arch., Lingga, Banka, Malay Peninsula, Borneo 2. *S. scorpioides*
 2. Bracts at the base of the umbel fugacious, 1—2 by c. 0.5 mm.
 4. Inflorescences robust, peduncle c. 3 mm Ø. Calyx slightly lobed or almost entire. Petals 5—6 (—7) mm. Drupe ovoid to oblong-ovoid, 2.5—3(—4) by (1.6—)2 cm. Celebes 3. *S. celebicus*
 4. Inflorescences relatively slender, peduncle 1—2 mm Ø. Calyx lobed ± halfway. Petals c. 4 mm. Drupe oblong-ellipsoid, 4.5—5.5 by 1—1.5 cm.
 5. Leaves (subcoriaceous to coriaceous) generally oblong to obovate-oblong, nerves (8—)10—12 (—14) pairs, ± distant from each other, a little or hardly raised, veins ± obscure. Sumatra, Simalur, Mentawai Is., Enggano, Banka, Billiton, Malay Peninsula, W. Java.
 4. *S. secundiflorus* var. *secundiflorus*
 5. Leaves with 14—18 pairs of nerves, these close together and generally a little raised on both faces as are the lax veins.
 6. Leaves obovate-oblong to elliptic, rigidly coriaceous. Borneo.
 4. *S. secundiflorus* var. *hosei*
 6. Leaves lanceolate-oblong to narrowly elliptic, coriaceous. Borneo.
 4. *S. secundiflorus* var. *lanceolatus*
 1. Flowers clustered at the end of the branches of the umbel or even at the end of the peduncle when the branches of the umbel are very short. 'UMBELLATI'.
 7. Bracts at the base of the branches of the umbel ovate, persistent, (3—)4 by 2 mm. Calyx lobed about halfway. Petals c. 4 mm. Drupe oblongoid, subacutely attenuate at both ends, 3.2—4.3(—5.5) by 1.4—2(—2.5) cm. Ceylon 5. *S. apicalis*
 7. Bracts at the base of the branches of the umbel generally small and caducous, rarely subsessile.
 8. Drupe subovoid-oblongoid to almost fusiform, at least 2 times as long as (or mostly longer than) across. (Leaves generally smooth on the undersurface, maybe except some tubercles found close to and along the midrib).
 9. Calyx rather deeply obtusely lobed. Petals (2.5—)3(—4) mm. Disk cup-shaped. Drupe 4.5—5 by (1—)1.5—2.2 cm. Lower Burma, S. Thailand, Malay Peninsula, Borneo.
 6. *S. malaccensis*
 9. Calyx slightly lobed. Petals (4—)5 mm. Disk low, almost patellar. Drupe (4.3—)4.5—5 by 1.5—1.7 cm. Eastern part of New Guinea, New Britain, Solomon & Palau Is. 7. *S. ammum*

8. Drupe ellipsoid-ovoid to ovoid, up to \pm 2 times as long as across.
10. Drupe \pm ovoid. Disk cup-shaped and slightly lobed.
11. Leaves practically smooth on the undersurface; petiole (2-)2.5-3 cm. Calyx rather distinctly lobed. Philippines (Sibuyan, Panay). 8. *S. gitingensis*
11. Leaves generally rather densely tubercled all over the undersurface or at least in a broad stripe along the midrib; petiole 1-2 (very rarely up to 3) cm.
12. Calyx \pm distinctly obtusely lobed. Petals 3(-4, very rarely -4.5) mm. Central, northern, and western part of New Guinea 9. *S. monticulus*
12. Calyx truncate or hardly (apiculately) lobed. Petals (4-)5(-6) mm. Malay Peninsula, Borneo, Philippines (Basilan; Mindanao; Zamboanga, Surigao).
10. *S. umbellatus*
10. Drupe subovoid-ellipsoid or ellipsoid. Disk thick, almost annular, edge undulate, not properly lobed at all.
13. Drupe 4.5 by 2.5-3 cm. Annam, Cochinchina 11. *S. perobtusus*
13. Drupe 2.5-2.7 by 1.5-1.6 cm. Annam 12. *S. dichrocarpus*

1. *Stemonurus grandifolius* Becc., Malesia 1 (1877) 114, t. 5, f. 1; Valet., Crit. Overz. Olacin. (1886) 235; Merr., En. Born. (1921) 356; Masam., En. Pl. Born. INCOMPLETE MATERIAL

Stemonurus sp. nov.

Ex aff. *S. grandiflori*, foliis permagnis usque ad 35 cm longis et 16 cm latis, margine ipso subtus manifeste catenato-punctato, inflorescentia umbellata, bracteis 3—5 mm longis persistentibus, fructu submaturo ± late elliptico usque ad 3 cm longo et 2.5 cm lato viso.

BORNEO. Sarawak: 3rd Div., Bukit Iju, Ulu Arip, Balingian, c. 120 m. fr. 31-7-1965, *Sibat ak. Luang S 23676* (L).

EXCLUDED

Stemonurus africanus (P. Beauv.) Miers, Ann. Mag. Nat. Hist. II, 10 (1852) 36, repr. Contr. Bot. 1 (1852) 87 = *Lasianthera africana* P. Beauv.

Stemonurus ? crassipes Kurz, J. As. Soc. Beng. 41, ii (1872) 208; Prel. Rep. For. & Veg. Pegu (1875) 37; O. Ktze, Rev. Gen. Pl. 1 (1891) 112 = *Anacolosa crassipes* (Kurz) Kurz, J. As. Soc. Beng. 44, ii (1875) 153.

Stemonurus littoralis Bl., Mus. Bot. Lugd. Bat. 1 (1850) 250 = *Gonocaryum litorale* (Bl.) Sleum.

Stemonurus macrocarpus Bl., Mus. Bot. Lugd. Bat. 1 (1850) 250 = *Gonocaryum lobbianum* (Miers) Kurz.

Stemonurus macrophyllus Bl., Mus. Bot. Lugd. Bat. 1 (1850) 250 = *Gonocaryum macrophyllum* (Bl.) Sleum.

Stemonurus ? membranacea Bl., Mus. Bot. Lugd. Bat. 1 (1850) 250; Walp., Ann. 2 (1851) 182; Miers, Ann. Mag. Nat. Hist. II, 10 (1852) 36, repr. Contr. Bot. 1 (1852) 87. — *Lasianthera membranacea* (Bl.) Miq., Fl. Ind. Bat. 1 (1856) 792; Becc., Malesia 1 (1877) III. — *Strombosia membranacea* (Bl.) Valet., Crit. Overz. Olacinae (1886) 87. — *Strombosia ceylanica* Gardn. var. *membranacea* (Bl.) Hochr., Pl. Bog. Exs. (1904) n. 101 = *Strombosia ceylanica* Gardn. 1846.

Stemonurus mindanaensis Merr. ms. = *Cyclostemon mindanaensis* Merr., Philip. J. Sc. 9 (1915) Bot. 479 = *Drypetes mindanaensis* (Merr.) Pax & Hoffm.

Stemonurus vitiensis (Seem.) Seem., Fl. Vit. (1865) 39, pl. 12 = *Medusanthera vitiensis* Seem.

Stemonurus yatesii (Merr.) Howard, J. Arn. Arb. 21 (1940) 469 = *Medusanthera gracilis* (King) Sleum.

Stemonurus yunnanensis Hu, Bull. Fan Mem. Inst. Biol. Bot. Ser. 10 (1940) 156 = *Pittosporopsis kerrii* Craib, cf. Wu & Wang, Act. Phytotax. Sin. 6 (1957) 279.

Stemonurus sp. Merr., Interpr. Rumph. Herb. Amb. (1917) 335. — *Fructus bobae* Rumph., Herb. Amb. 3 (1743) 166, t. 105. To judge from the nervation of the leaves and the fruit certainly not belonging to *Stemonurus*. Teysmann, quoted by Hasskarl, Neue Schlüssel (1866) 62, placed it in *Platea*. Possibly *Merrilliodendron megacarpum* (Hemsl.) Sleum., which, however, is not yet known from Amboina.

Urandra elliptica Merr., Philip. J. Sc. 5 (1910) Bot. 195, non Schellenb. 1923 = *Sapium luzonicum* (Vidal) Merr., En. Philip. 2 (1923) 461.

Urandra plumbea Elm. ms. = *Mastixia philippinensis* Wang., cf. Merr., En. Philip. 3 (1923) 241.

26. WHITMOREA SLEUM., A NEW GENUS FROM THE SOLOMON ISLANDS

WHITMOREA

Sleum., gen. nov.

Arbor. *Folia spiralia, integra, coriacea, pinnatinervia, petiolata. Inflorescentiae axillares pedunculatae, apice pedunculi cymas scorpioideas 3 vel 4 pedunculatas sat paucifloras modo umbellae cruciformis gerentes, bracteis basi umbellae tuberculiformibus sat obscuris. Flores bisexuales, generaliter breviter pedicellati, uni- vel biseriatim dispositi; bracteae basi pedunculorum secundariorum tuberculatae, sat obscurae. Calyx alte campanulatus, truncatus, persistsens. Petala (4—)5, oblonga, valvata, parte apicali sat brevi tantum libera, ceterum connata, apice minute acutato-inflexa, intus costata, caduca, inodora. Stamina (4—)5, cum petalis alternantia, ima basi petalorum inserta; filamenta linearia, loco insertionis tenuia, ceterum carnosa, intus infra antheras, extus ad connectivum pilis subclavatis elongatis subdense adpersa; antherae lineares, basi thecis divergentes, basifixae. Discus anguste annularis, vix incrassatus, subinteger, sat*

obscurus. Ovarium superum, ovoideo-conicum, apice quasi truncatum, i.e. summa parte modo cupulae inversum ibique in marginis parte unilaterali stigma parvum papillosum subbilobum gerens, uniloculare, ovulis pendulis 2. *Drupa* oblongo-ellipsoidea, per partem $\frac{3}{4}$ inferiorem laevis, superne papillosa et discolor, apiculata; exocarpium carnosum tenue, mox dissolutum; endocarpium strato exteriore longitudinaliter fibrosum, interiorre crustaceum, intus laeve. Semen 1, ellipsoideo-subquadrangulare, medio circumdepressum; albumen copiosum; embryo minutum apice albuminis instructum.

Genus monotypicum, a genere *Stemonurus* Bl., cui proximum, floribus generaliter pedicellatis multoque maioribus, petalis alte connatis, et praecipue ovario apice cupuliformi-depresso stigmateque unilaterali in margine cupulae istae instructo diversum. Insulas Solomonenses incolum, cl. T.C. Whitmore, exploratori insularum illarum indefesso dedicatum.

Whitmorea grandiflora Sleum., sp. nov. — *Urandra umbellata* [non (Becc.) O. Ktze] Walker, For. Fl. Br. Solomon Is (1948) 127.

Arbor 6—25 m, cortice cinereo vel brunneo. *Folia* elliptica vel oblongo-elliptica, apice obtusa saepius brevissime emarginata, basi late cuneata vel rotundata, coriacea, firma, glabra, 14—22 cm longa, 4—8(—12) cm lata, costa supra leviter immersa, subtus bene elevata et obtusa, nervis lateribalibus 20—25-paribus inter sese subparallelis, ceteris intercalaribus minus distinctis additis, omnibus utrinque prominulis, rete venarum venu-
larumque denso supra tantum parum conspicuo; petioli 2—3 (—4) cm longi, 2(—3) mm crassi. *Inflorescentiae* axillares solitariae, petalis exceptis puberulae punctisque resinosis obtectae, vel interdum totae resina illinitae; pedunculus 2.5—4 cm longus, 1.5—2 mm crassus; pedunculi secundarii 3 vel 4 umbellatim modoque crucis dispositi, 1—2(—3) cm longi, apice recurvo flores 3—5(—7) uni- vel biseriatim instructos gerentes. Pedicelli 0.5—2(—3) mm longi, 1.5 mm crassi. *Calyx* obconico-cupulatus, in sicco rugosus, apice truncatus, basi haud raro quasi in stipitem brevem contractus, 4—5 mm altus, 6—7 mm diam., sub fructu appланato-expansus. *Petala* oblonga, ab apice secreta, chartacea, viridi-lutescentia, glabra, (12)—13—15 mm longa, 3—4 mm lata. *Filamenta* 9—10 mm longa, 1 mm crassa, infra thecas dorsoque ad connectivum subdense longeque albido-pilosa; antherae lineares, 4 mm longae, 1 mm latae. *Discus* obscurus glaber. *Ovarium* ovoideo-conicum, apice quasi truncatum ibique modo cupulae inversum. *Drupa* oblongo-ellipsoidea, basi obtusa, apice apiculata, 3.5—4 cm longa, 2—2.5 cm lata; exocarpium in parte $\frac{3}{4}$ inferiore laeve plenaque maturitate rubro-tinctum, superne papillosum et griseo-lutescens.
